Eric Zelman - **00:00**

Sam.

Luis Sampaio - **04:41**

Hey, Mr. Eric. How are you?

Eric Zelman - **04:44**

How are you?

Luis Sampaio - **04:45**

Let me just switch on my camera. I'm okay.

Eric Zelman - **04:54**

Oh, there you are. Hey, look at that.

Luis Sampaio - **04:59**

Yeah, I'm growing it. Growing it. How, how have you been?

Eric Zelman - **05:02**

I'm okay. I'm good. I'm good. What's going on? I've been building this, this contraption of mine and I wanted to show it to you.

Luis Sampaio - **05:14**

Contraption, Sorry, what's a contraction?

Eric Zelman - **05:17**

Contraption is like, it's a word for like a machine. Right. Or this project.

Luis Sampaio - **05:24**

Cool.

Eric Zelman - **05:25**

Yeah, yeah. How are you? How's it, how's it, how's your week? How's your month? Are, are you alive?

Luis Sampaio - **05:34**

My brain stopped working last week. I went into a shop, they asked for my email. I gave them the wrong email. They gave me a receipt and I promised to everyone that I wasn't given a receipt and I then found a receipt in my house. My brain just didn't work last week. I don't know what's happening. I don't know what's happening. Yeah, it's like a sleep.

Eric Zelman - **06:08**

How's Michael and Jenny?

Luis Sampaio - **06:11**

Michael and Jenny are well. We managed to keep Jenny. Did you know?

Eric Zelman - **06:19**

Yeah, yeah, he told me that. I think last time we spoke. Yeah, I was super happy about that. That's great.

Luis Sampaio - **06:24**

Yeah, we managed to keep Jenny, but we just had layoffs last Friday.

Eric Zelman - **06:31**

Yeah.

Luis Sampaio - **06:32**

So everyone is still nervous. Yeah, everyone.

Eric Zelman - **06:38**

Yeah.

Luis Sampaio - **06:38**

And I don't know, I think that with Iran's war, it will be probably. Interest rates will not go down. It will be trickier for companies to keep up with their debt. So I don't think it will improve.

Eric Zelman - **06:59**

Right. Yeah, no, I know. Yeah, I saw. You finally don't have to deal with Chris Williams again.

Luis Sampaio - **07:06**

Oh, I didn't even know. Did he leave?

Eric Zelman - **07:09**

He's going to. Yeah, he's going to Pat's. He's going to Brit if he's going to Pat's company.

Luis Sampaio - **07:13**

Oh, wow. I didn't, I did not know.

Eric Zelman - **07:17**

Yeah, he put it on LinkedIn or something. So he's out. And I heard Kent may or may not be out.

Luis Sampaio - **07:26**

Kent is not out, but there's a new product person, so maybe he'll be out. Ishmael is out.

Eric Zelman - **07:35**

Yeah, I reached out to him but I didn't hear back. I was, you know. Yeah.

Luis Sampaio - **07:40**

Did you Write something on LinkedIn, Ismail?

Eric Zelman - **07:44**

No, no, but I, I, I heard from, Did I hear from? I can't remember who I heard from actually. Like, I'll have to check that, but it was like a day or two ago. I heard that.

Luis Sampaio - **07:59**

Yeah. I also. I lost people that you don't know from Chopad. They resigned. We didn't let them go. They resigned. They just couldn't deal with job insecurity.

Eric Zelman - **08:15**

Yeah. Well, I mean, if. I guess if they have something better, good for them or just something more.

Luis Sampaio - **08:20**

Stable doesn't need to better.

Eric Zelman - **08:22**

Right. Well, you know, I mean, something else. Something else.

Luis Sampaio - **08:26**

But I'm. I'm happy for them. But. Yeah, things are much harder now.

Eric Zelman - **08:33**

Have you started. Have you started looking around or are you just head down?

Luis Sampaio - **08:41**

I'm. I have my eyes open.

Eric Zelman - **08:43**

Yeah.

Luis Sampaio - **08:44**

I had an offer for, you know, Moody's.

Eric Zelman - **08:50**

M O T U S M O.

Luis Sampaio - **08:53**

D Y s. I think Modis or Moody's or something like that.

Eric Zelman - **08:59**

What do they do? I don't know them.

Luis Sampaio - **09:02**

They check countries. Oh, the.

Eric Zelman - **09:04**

Oh, M O O D Y S. The credit company.

Luis Sampaio - **09:08**

Yes, yes.

Eric Zelman - **09:08**

Yeah, yeah.

Luis Sampaio - **09:12**

But then I got really sick. I didn't attend. I wasn't really an offer, but I didn't really. I didn't attend the last interview and I. It didn't work out.

Eric Zelman - **09:24**

Right. I'm sorry. All right. So I've applied to like a hundred and thirty jobs probably, and I've had maybe, I don't know, four, five, six interviews, and nothing has really happened for me yet. So I'm still looking. And you know, as you've said to me, the day that you get let go, you'd be like, you were half joking, but you're like, I'd be looking at jobs at Burger King. I haven't come to that point yet, but, but it's close. And so I started building this workflow in using Claude code to scrape venture capital investment sites for the companies they're investing in, because I think that I'm best suited at a small company that is just getting. It's maybe a round funding. I think I'm better off at a startup than a big company.

Eric Zelman - **10:27**

I mean, you know, me and I'm probably more of that blended first customer success for person who does customer success and support versus being a support manager for a bigger company. So, you know, it took me a while to figure all this out, but. So that's, that's my mission. But I had to build a tool to find those things because those companies don't post jobs. Right. Necessarily. And there's a lot of them. Right? There's just thousands. And I started thinking about what do I need to know about myself to know if that company or that product or that space is the right fit for me. So I started to think about, and I might told you about some of this.

Eric Zelman - **11:19**

I started to think about a tool that I could create and I did this in Claude that basically allows me to take a whole bunch of different inputs like my resume, information from LinkedIn, whatever I want to put in there, I could put code in there, I could put portfolios, I could put anything I've done. I could put recommendations on people. So I could put disc assessments, emotional assessments, all the crap that goes into your career and create a structured MD file that is more than a resume and has all these different things in it. And so in some of these kinds of things that this file has are things that I want or don't want. Working styles, how I like to work, what kinds of companies do I want to work in. But not just in a broad way, but very specific.

Eric Zelman - **12:11**

For instance SaaS versus PSG product or PLG product led growth. Working for companies that have less than a say.

Luis Sampaio - **12:26**

But just one question. This is for you to find them or for you to give to them?

Eric Zelman - **12:32**

This is for me to find them.

Luis Sampaio - **12:34**

Okay. Okay.

Eric Zelman - **12:36**

So what I did was I built this file and it has all of my stuff in it. And then I built a scoring system that takes all this information in the file and allows me to basically say, okay, if an ideal company is 100. Right. Say this company has, I don't know, 400 people. Maybe that's more than my maximum. So let's knock some points off for that or say that company for instance, because you know, we're in it. I mean, you know this better than 90% of or 100% of everyone else. You know, there's certain kinds of things that I can support and there's certain things that I'm not going to be good at supporting. So what's a good example of that? Like for instance, Customer success for B2B SaaS is very different if you're talking about lab or life science customer success.

Eric Zelman - **13:32**

Like if the customer profile is someone that I'm not familiar with. Like for instance, I'm not going to be a good customer success person. The customer. Sorry about that. I. Sorry, I accidentally just kicked the power cord out of my laptop. So. So for instance, certain customer profiles aren't going to be right for me. So all this has to go into this MD file. Let me just show you what.

Luis Sampaio - **14:24**

So you're saying that you would discard what's not right for you?

Eric Zelman - **14:29**

No, I'm saying is that I want to rank things based on what would be perfect or close to perfect versus what would be very wrong.

Luis Sampaio - **14:40**

Okay. Would Claude also send them a message?

Eric Zelman - **14:45**

It could. So what this system does is that. So let me give you a little bit more detail on what this all looks like. Let me share my screen.

Luis Sampaio - **14:57**

Just so you know, I've never seen Claude.

Eric Zelman - **15:01**

Yeah, it's amazing. It's amazing. And if, and if I still had my old job, I would be using it 100% of the time because there's so much data that there's so many different ways of doing analysis of data that I would have never been

able to have tapped into on my own. I would have just thrown away Power bi and it would have just been an amazing tool. So let me just pull up a couple of things here to show you. So what happens is that I built a lot of basically JS scrapers that go through and interrogate venture capital investment sites. So I've got everything from scrapers going against dozens of VC firms and all their investments. Right, right. So I've built a system that, and I take VC firms in and out. Right.

Eric Zelman - **15:59**

So I basically built a shovel and it pulls all this data, it pulls all these companies in and then it looks at my lens and then it does a whole series of data enrichment things in a pipeline. So it knows that said, okay, here's the things that Eric wants, but it goes and uses tools like Brave, which is similar tools like Crunchbase. And basically those are tools that through an API can tell you all kinds of information about a company, like what it's last, what its last funding round was, when it was started, their customer base is, where they're located, how many people they have all this stuff. Right. And so I'm pulling all that information in and then what I'm doing is I'm basically populating all these things into airtable, right?

Eric Zelman - **16:47**

Which is a very easy to use AI driven database where I can have the best possibility here for figuring out what kind of companies I want to look at. So sometimes it gets it wrong. Like I'm not interested in Gainsight or Octa, but I just ranked whatever I have right now from top to bottom. And so I can go through this list and I can start to pick off which ones of these I want to do research into. And it gives it a score and it also tells it what series of investment it's at. I have information about, you know, again, enrichment Employee count, total funding. And then I also have information about the profile of the customer customer profile, like who are they selling to? Because again, that's going to pretty much important part of what I want to do, right?

Eric Zelman - **17:47**

Or what I'm going to be good at. All of that could be customized for someone else, right? Say you're someone who doesn't want to work for a startup and you don't care about what customer profile or you have a totally different customer profile or you're not in sales. This is basically an idea of creating a tool that AI uses as a reference for understanding someone's fit into a company based on things like Brave, based on Anthropic's API of scouring the web. So it does multiple rounds of investigation of these companies to try to match you with something. Now, I'm not trying to, I built this for me, but I'm not here to tell you I'm not here or I'm not trying to build a job scraping app because those things exist. There are lots of those.

Eric Zelman - **18:44**

They don't do this, they don't do venture stuff, they don't go as deep as what I did for myself. But I'm actually not necessarily. That's not really my focus. What I'm trying to do is create a tool that could take all of these different feeds about someone and give them a report and then possibly lead to, on the other side, companies using this to be able to interrogate, or not interrogate in a negative way, but to better understand who they're hiring to avoid bad hires. Because if you put in a lot of high quality information into what this lens is, what you're going to get is something that speaks really about who you are versus about how you fit a particular job.

Eric Zelman - **19:39**

So for instance, like if you've applied in the last forever, you know that right now everyone's using these ATS systems and everyone just creates resumes that are just a whole series of keywords. It's like that game Bingo, right? They just try to load their resume up with as many keywords that match the job description as possible, whether they can actually do the job or not. And you know, I know from working with you for years that you know that like it's not until you actually start to talk to someone that you start to figure out like what the hell do they actually know? Are they exaggerating? Is this real?

Luis Sampaio - **20:16**

Yeah.

Eric Zelman - **20:16**

What's going on here? So I think that for some companies and for some people having something bigger than a resume And a cover letter is going to be important and you're going to need a system that can basically be able to understand what that looks like. So the first step of that on the user side is something that I.

Luis Sampaio - **20:43**

Wait, so you're trying to create an app to sell?

Eric Zelman - **20:48**

I'm. So, yeah, so I'm. What I want to validate and what I'm. What I'm asking you to do is to help me validate an intake form that I'm going to send to you, which is going to walk you through creating what this Lens file looks like.

Luis Sampaio - **21:07**

Okay. Okay, cool.

Eric Zelman - **21:09**

And so what this is going to do is it's going to ask you to upload materials. It's going to take about 25 to 45

minutes. So I mean, it's not instant, Right. It's not meant to be a five minute thing. It's going to. Quality is everything. And you know, I mean, it's AI based, so garbage in, garbage out. Right. So if you put in real stuff, like disk assessments that have been well scored, if you put in a rich amount of material, you'll get a better result.

Luis Sampaio - **21:42**

Yep.

Eric Zelman - **21:42**

And, and so it could be literally anything that you have that could be parsed by, by anthropic. Right. I mean, right now I haven't set it up to do this, but I mean, at some point it could very easily be videos of someone making presentations.

Luis Sampaio - **22:00**

Is this online? Can I have. So I can access.

Eric Zelman - **22:05**

Yeah, yeah, yeah, yeah. So I hosted all this in Vercell. And yeah, so it'll walk you through this. It'll ask you like, are you employed? Are you looking around for a job? Are you in transition to another job, you know, considering things? So maybe you're not actively looking. It'll walk you through several steps and then it'll basically bring you to a chatbot that I've given some prompts to help uncover this information from you that it needs to build the file. When it's done, it will create an MD file that I will get and that you will get if all things are working properly. And, and what will the outcome look like? Okay, so on the one hand, right, let me just show you the ugly MD file because you'll say, why would anyone want this?

Eric Zelman - **23:05**

And I'm not saying that the MD file is the thing that they're going to want, right. But let's take a look at what that looks like. So the MD file might look like this and it's, you know, it's going to have a lot of stuff in it. Right. So my MD file has things about my background, about my identity, about work style, how I like to work, values that I have. Okay, this is just an example, my actual one.

Luis Sampaio - **23:43**

But this is just going with the data you've added is not guessing how you work for, from, let's say, your past jobs.

Eric Zelman - **23:55**

It's not, it's not. It's going in what you put in there. So the more you put in, the better the result.

Luis Sampaio - **24:02**

Right. Okay. So this will only work for people that know what they want.

Eric Zelman - **24:07**

Well, I don't think that's 100% true because the more that they add, the more it kind of uncovers. So the anecdote that I tell is that, and I think I told you this a few months ago, I took one of those disc assessments and for the longest time, I mean, like forever, okay, I thought that all of those things were complete bullshit and that, you know, and I would take those tests at work, at previous jobs before I actually started working with a coach, I would take those tests and I would just game them. Because you're going to fill out what you think the person wants to hear.

Luis Sampaio - **24:44**

Exactly.

Eric Zelman - **24:45**

Right. So when I then went and started to fill one of these tests out where it wasn't clear what they wanted because I was working with a coach. Right. And so this is a consideration when working with a coach where there wasn't someone like Pat or Bob or whoever asking me do this. Right. What I gave was a much more honest answer. And that honest answer when that data was brought out by the coach I had who's been doing this for a long time, was astonishingly like me. So I'm not trying to say DISC assessments are great.

Eric Zelman - **25:23**

I'm just saying that if someone approaches this with sincerity, they can get a lot more out of it than if you approach it from the perspective of, I'm just going to do this because my boss told me to do it, I'm going to try to answer it the way that they told me to answer it. And I totally think that most people who have ever done these tests have done it that way versus having done it.

Luis Sampaio - **25:43**

Can I just add one suggestion?

Eric Zelman - **25:46**

Yeah.

Luis Sampaio - **25:48**

I think you should also have a prompt that says companies with vacancies. Do you want to look for companies with vacancies or do you want to look for companies going through this vc?

Eric Zelman - **26:02**

Well, I think that is a great suggestion. And at some point, when I get to a point where there's a product that, where I start to think about those things. But the first thing I need to. To I think that I need to do here, the where. Where I'm. I'm asking for help right now is this intake form. Because this is really. This is really the first step. And then where this, you know, and how this data is applied, that's different. I mean, so here's an example. Ravi is like one of the most perfect people I could ask to test, at least in my head. Because. Because Ravi just left Big Tin Can. Ravi's in CS and that. And Ravi is interested in working for startups, right?

Luis Sampaio - **26:46**

And he really knows how to explain things as well.

Eric Zelman - **26:50**

Oh, 100%. So I asked Rob. He hasn't. We haven't talked this week, but I asked Ravi last week to become a tester, because Ravi is much closer to me in terms of what he's looking for than, say, me asking Alyssa, you know, to test it. Right? And so if this tool can work for me, maybe it can work for Ravi. And it's more likely that it might work for Ravi or be interesting to Ravi than it might be for someone else. But that's also because the shovel I built right now is looking at certain kinds of VCs, right? And what I'm sort of getting at here is that the lens part, that information could be applied to a lot of things. And I don't know all the answers to that yet. I just know that I have two pieces.

Eric Zelman - **27:41**

I have the idea of the. Of the user and of the company. And on the company side, I'm starting to work with people on a few people, not a lot, but like a couple people that I know who have been in HR for a long time about. What are you looking for? Is this a problem that you need to solve in terms of hiring? I've heard two things. One is, yes, hiring mistakes cost the company a lot of money. We want to avoid those. And I've also heard from people like one of my coaches who said for some of his customers, they don't give a shit about making a bad hire. I mean, it happens, but they don't spend any money on it. They just get someone else to take the role.

Eric Zelman - **28:27**

So, you know, I mean, this isn't like necessarily everyone's problem either, right? What I did last week was I took the core of this that matches the. That on the user side where it does all the scoring. It has all the math about saying, here's weighted scoring. Because Lewis wants a company of X size and X amount of investment, and here are his preferences and that these have all this sort of scoring math around it.

Luis Sampaio - **29:02**

What if you don't know, like let's say for someone like me, I don't know anything about investment. I don't know what company. Like let's say my question is what if you don't know answer to a question like let's say investment. And my answer is I don't know. I.

Eric Zelman - **29:22**

Right. So. So the tool doesn't explicitly go through and say what are like it's not as black and white as the as. As saying like how much money do you want a company to have had an initial investment? Right. The. That's not an actual question that's there. It's something that I put in to my prompt right when I was building this. Okay. So I think it's gonna be a little different for people and that over time. Also what I envision is they're going to come back and refine this. They're going to, they're going to say, you know what, I want to change some of my answers, I want to add more information. Or I had this great review at work where it really showed something about me that I want to put in here.

Eric Zelman - **30:04**

Or I did this really amazing project that I want to sort of. That helps explain who I am, you know. And so I think that this is really just about creating a kind of starting point. So, you know, what I showed you was this idea of that you could have it. You know, I can use it for myself as a tool in airtable. But more specifically, after someone walks through this, what I'm envisioning they get are a couple of things. One is that, so here's a hypothetical. This is just a made a person. One would be maybe a PDF report, right?

Eric Zelman - **30:49**

A simplified version of all the stuff that goes into that MD file that talks about their skills, their essence, what they're looking for, what energizes them, maybe disqualifiers and then how the scoring was done to come up with this sort of overview of what they're looking for. And that this file, to your earlier question, would go along with some number of steps that have yet to be, I haven't built that would say based on this file, go and look for jobs for Sarah that fit these criteria. Right. So that's there. And then the other kind of report that I think is interesting to consider is like a weekly report around jobs. So I made this one with some real and real job opportunities that I had. Right.

Eric Zelman - **31:52**

So this is what would happen with your Weekly email or what would a dashboard look like from this tool? So you did all this, you went through, you uploaded this into the system and then maybe it gives you list of jobs that it thinks you should pursue. Information that you want to know based on your scoring criteria, you know, where there might be good fits, where there are not good fits. Now there's a lot of different ways that this could play out and there are a lot of different companies that create AI based job search tools. But what I've noticed from all of them is that they do it very superficially. They really, you know, and that might be the right motion, right? That might be the right thing. I don't know the answer to that.

Luis Sampaio - **32:48**

Maybe it depends on the seniority. I'm guessing the person for the job.

Eric Zelman - **32:55**

Yeah. What I like about what I've done is that through using this system or anthropic, I can go find a company, figure out, okay, this company was, yeah, it's a VC or sponsored by a VC. It's small, it has 10 people. But they got their A round funding six years ago and nothing happened, right. So they're not growing. Or I find out that they got really huge and then they shrunk, or that they got bought out or all these different kinds of things that happen and that it can happen at scale because I don't have time to go through 3,000 companies to figure out where I want to pursue. So. So where am I going with this?

Eric Zelman - **33:44**

So I think that the first part of this is to sort of have a tool where someone could build a profile, get a better sense of themselves and what's happening them in their career. Ravi said to me, I like the idea of this tool because for 10 years or so I've just been worrying about Big Tin Can. I haven't thought about me, right? What do I want to do? What am I good at? What else is out there for me? How, you know, how do I look at my career? And I think that tools like this could help to have someone reframe or understand a broader narrative around what they do. You know, like if you're a salesperson like Pat or Chris Williams, maybe you don't care about this because you're like, I do B2B enterprise SaaS. Why would I bother with this?

Eric Zelman - **34:31**

But I think for me and maybe for a lot of other people, you know, you look back on it and you're just like, I kind of need something to help me frame up the picture of who Eric is. What, what is Eric good? You know, where Would I fit? Where would I not fit?

Luis Sampaio - **34:50**

I'll do it.

Eric Zelman - **34:53**

Yeah.

Luis Sampaio - **34:54**

This done by, you know, let me.

Eric Zelman - **34:58**

Just walk you through a couple slides just to. Because I should have done that before, like in the, you know, if you have time this week, next, I mean in the next week or so, if you've, you know, I, I don't want to, you know, like, I appreciate anything that you can. I appreciate your time. Right. I don't want to put any kind of pressure on you for it. So it's about again trying to figure out who is Lewis. What are actionable outputs that could be used from this gathering materials. Doing the intake form. There's a feedback form that I'll send you in the email. Talks about, you know, what would. What. How did it work? What do you think of it? Talks about some of the things here that you can bring. As I mentioned, you could print, you know, your LinkedIn profile.

Eric Zelman - **35:48**

I don't have a good way of scraping LinkedIn. So if you want to put LinkedIn recommendations, which I think would be really cool, unfortunately I think you have to print those as PDF and upload PDFs of LinkedIn because I haven't come up with a good way yet of. Or I haven't come up with a good scraper for LinkedIn. There's going to be a few sections where it's going to get built. We kind of went through this that the. There's going to be a feedback form. So does it represent you better than a resume? Is this something that you would. If. If you had this document? If a recruiter was interested in this document, would you share it with them? Did it surface anything new that you didn't know about yourself? What was most strongest? What was weakest? What was missing?

Eric Zelman - **36:43**

Would anyone ever pay for this? That's the magic question there, Louis. If more people pay for this, the sooner I call you and say, louis, you have to work for me.

Luis Sampaio - **36:56**

But shouldn't. Should then you be giving this out for free to get people using it?

Eric Zelman - **37:02**

Yeah, I think that's the first step. I think that's the first step. But I also like the idea that it's free and if you pay something, you get a much better version of it that goes deeper, it does extra stuff.

Luis Sampaio - **37:16**

But what I mean is if you give it fully for free for a while, people will start saying, hey, I use this. Really work it. It really worked to their friends. It's just like any other service, right? Just like Facebook. It didn't have ads in the beginning it was just completely free. And you would get also more data.

Eric Zelman - **37:41**

I would. I mean the thing I have to balance here is that to get this all to work isn't free. So the question is for me as a free project is it's one thing for me to pay for, you know, anthropic and brave and, and N8 Nathan, the orchestration layer and all the tools I use to build this. But if it was to scale up, right. So then like, you know, if hundreds of people were using this or thousands of people, then I kind of need a, I need a revenue stream of some sort of to pay for the infrastructure.

Luis Sampaio - **38:19**

When I say for free is, I mean it's unlikely that you'll get thousands quickly.

Eric Zelman - **38:26**

No, I won't.

Luis Sampaio - **38:28**

So if, if you get a few a week, like let's say 5, 10 a week, people using this.

Eric Zelman - **38:36**

Yeah.

Luis Sampaio - **38:36**

Then, then you get in data, you get in that data they telling people and hopefully things are going in the right direction. And if you have a switch that you can quickly switch on to say, to close it to say now people have to pay.

Eric Zelman - **38:56**

No, yeah, no, I, I, yeah, no, I agree. I mean one of the ideas that I have around it also is that of doing two things. One is having a free version and trying to build a business plan to basically bootstrap or get some seed funding so that I can work on this pretty much as a full time job. Because I think that. So the other thing that I did here, which may or may not hold water. I mean as they say that, you know that phrase, hold water. Yeah, yeah. So the other thing that I did here is. I don't know if this is in here, but I basically. Is it Louis, where is it? Hold on a second, sir. I put in a provisional patent.

Eric Zelman - **40:06**

So the other thing that's going on here basically is that the concept of a bi directional scoring system for employer and candidate doesn't seem to have ever been brought to market or patented. So what I think is interesting around that is I want to know why. Right? I'm probably not the smartest person in the world. So like I want to understand why this doesn't exist, right? I want to know why when you apply for, when you go to a company like, you know, all these jobs are hosted by these companies like Rippling or Lever or Ashby, you know, these big HR systems that host everyone's job sites, right. When you go to apply that all go through the same engine, they all have ats.

Eric Zelman - **41:06**

I want to know why The ATS systems aren't already thinking about this because companies spend so much time

and money. Why is the jd, which is maybe a paragraph or two, the only thing that they use to evaluate fit besides just getting all those resumes in and then just the keywords of ats, you know what I'm saying? Yeah, that part is a mystery to me and I'm trying to figure that out. One of the things that I, I've noticed about all this is that. And one of the things that the patent talks about is that you could have a company create its own lens. So just like I did this for me, or you could do this for you.

Eric Zelman - **41:54**

A department, a company could do this for themselves so that if they got a hundred resumes, a thousand resumes or whatever, they're getting applications for this, they could use that lens to. And then the workflow, you know, with the same way I do enrichment data on companies, I could use anthropic to do background checks and to look these people up. And I don't know that any of that. Actually, I'm not saying that I want to see a world where. I don't know that I want to see a world where AI just background checks on us. I don't mean that literally, but I guess I'm getting at is that this system could work in both ways. Someone could use this to help find a job and an employer could use this to help find the right fit for an employee.

Luis Sampaio - **42:46**

I like it. I like it. I mean, I'll only be able to give you more feedback once I go through it and feel it. So, yeah, I will fill it in carefully and I'll. And I'll let you know.

Eric Zelman - **43:10**

Yeah, I mean, you know, it's a 1.0. So I mean, like, I appreciate any feedback that you can give. You know, like, did this feel way too long for the amount of what you got out of it? Just the chatbot. Stupid. Did it crash on you? I mean, all those things could really happen. I, I've played around with it a bit, enough to know that I think it's working. And I'm trying not to change the code right now. So if everyone. I have about 10, 15 people, 10 may, 10 people that are actively testing and have a few more I've invited. So if I get a dozen people in the next week or two saying this is great or this sucks or whatever, then in a week or two I'll have an. I'll build a new version with those.

Luis Sampaio - **43:51**

Also Have HR people testing?

Eric Zelman - **43:56**

Yeah, so. So not. Well, I have a friend who has worked in HR who's going to be testing, okay? So she works for an insurance company and she does HR for an insurance company. So I'm excited about her feedback and I want to add more HR people. I have a coach of mine, a career coach who's me testing. Because the other thing that I think could happen here is that the discovery part, right? I mean, the thing I didn't talk to you about in the last 40 minutes while we've been on the phone, I'll let you go because I don't want to keep you all night, is that, you know, I spent all

this money on career coaching, which helped me to build out this file, right?

Eric Zelman - **44:45**

So this overview, this discovery, this intake form, this chatbot is built off of the career coaching work that I did, okay? And, and I think that the other thing that could work here is that career coaches could use this tool as a means of working with people who aren't going to want to pay the $150 an hour to work with a live human being one one. And that AI chatbots on their own can do a lot of things. But if you train one based on a coach's methodology, that could be a really interesting thing. And I think for some of these coaches, I may have had two. So this is two guys, one guy in the uk, one guy in the States, but they both see possibilities there because they don't have a tool like that right now.

Eric Zelman - **45:38**

And they both know that they can't get. They can. The problem that coaches face right now is that, I mean, like everyone is that how do you book people for coaching, right? How do you get people to pay for coaching? It's expensive. So if you've been doing career coaching with people for 10, 15, 20 years, you've got your own methodology. If you could, if you could put that into a system that helps someone, you know, find a job or whatever, and you could have like a module that would be useful. So the way I look at this system here with the lens, right, Might be different for someone who's not looking around, maybe they want. So here's an example again, edge case. But I'll throw it out there, you know, a year ago, when big ting can get bought, right? I'm panicked, right?

Eric Zelman - **46:29**

So if I had a tool that could help me through coaching, understand, here's my career arc, here's how I maybe fit in and how I can better understand how to navigate what's next for me in my career. You know, that would be really, that would be an exciting thing to be able to do. And I think that through these, this idea of a user profile opens the door for a lot of different things beyond what a resume would do.

Luis Sampaio - **46:59**

Definitely. Well, I don't know much about it, but I'll fill it in and tell you what I think.

Eric Zelman - **47:09**

Yeah, no, I, I, I totally appreciate that.

Luis Sampaio - **47:14**

I haven't searched, actively searched for a job for such a long time. When I'm looking around, what I do is I just see what's around me in my city and I click apply.

Eric Zelman - **47:31**

But, well, I think the other thing that this tool could do is that like when you go and put your name and resume into things like LinkedIn or Indeed, and it comes back with jobs, they're very superficial matches. Right. So the thing is that like you might get those matches every week, but you're not going to want to look through all of them because a lot of them are just going to be bad fits. So I also think that there's a role for AI based recruiting, kind of reverse recruiting, basically, where you like, say you're okay, say you're not so miserable that you're going to quit tomorrow, but you want something that looks around for you in the background to tell you if there's something really great that you might be missing.

Luis Sampaio - **48:18**

Yeah.

Eric Zelman - **48:22**

So, yeah, so, yeah, now you know. Yeah, I got to get some more people, I got to make it useful. I got to have the aha moment where someone's like, this is really cool. I like this. And we'll see if any of that happens.

Luis Sampaio - **48:39**

I think you should post it on LinkedIn and see if people use it.

Eric Zelman - **48:46**

I don't know if I'm ready this week, but once I get through a few people trying it out, you know, that's definitely possible. I noticed that. Remember Jared Hibbs? You remember him?

Luis Sampaio - **48:59**

Yeah, I remember the name. I don't remember him, but he.

Eric Zelman - **49:03**

Posted this thing on LinkedIn a couple days ago because I never really talked to him too much at Picton Can. I didn't, like, we didn't spend a lot of time like, you know, I didn't really, he was like sales ops or something. I didn't really talk to him that much. But he built this LinkedIn post manager so that, you know, like people who post all the time to LinkedIn for their company or whatever can cue them up and Track them and do all this stuff with analytics, but from a dashboard and it's a really simple tool. So he's. I don't know if it's become his revenue source, but he posted this on LinkedIn the other day and made me.

Eric Zelman - **49:40**

I was like, oh, I got to connect with Jared Hibbs because, you know, he's kind of doing like, it was like, what have I been doing since I got laid off kind of project. And that's kind of, you know, I'm like, can you monetize that? Is he. What is, how is it going for him? How does he have testers? How did he go about bringing it out? You know, what is he thinking? So that was kind of interesting.

Luis Sampaio - **50:06**

Let me, let me find it. I'll send him. I just sent him a request as well.

Eric Zelman - **50:12**

Yeah, it's pretty cool. Have you seen. All right, this is completely unrelated to my stuff, but have you seen this company, Pylon? P, Y, L, O, N. Eric, I.

Luis Sampaio - **50:24**

Haven't been doing anything. I've just been working and sleeping and drinking. Work, sleep, drink, repeat.

Eric Zelman - **50:31**

So I've never seen their product, but there's this company called Pylon that I applied to and I was kind of excited about working for. And basically what it is it's a, it's a new, A, like brand new kind of if you know how, like there are those CS tools like Gainsight that people like Steve Hendricks and all those folks would have been using to understand more about what's going on their customers. So what Pylon is a mix of Gainsight and Zendesk as a single product. So it's basically the whole customer journey post sales. It's not just tickets and it's not just the CRM

and it's.

Luis Sampaio - **51:09**

Oh, it's probably similar to something we're using called Funnel Story.

Eric Zelman - **51:16**

It's sort of, it might be sort of like that, but Pylon is designed around like actually taking in and replacing Zendesk specifically. It isn't just the data and analytics story, but it's the whole ui, it's the whole ticket management system, it's the whole customer engagement system.

Luis Sampaio - **51:34**

Got it, Got it. Yeah. This one takes information from Zendesk.

Eric Zelman - **51:39**

Yeah, yeah. So. All right. What, what, so, dude, what, are you going to take any trips? Are you going anything? Do you get time off? Are you, are you going to tell them you need a weekend to go to, to anywhere? What's happening?

Luis Sampaio - **51:57**

I just had two weeks off and yeah, I just Came back. And it's crazy because on my time off, instead of relaxing and decompressing, I was heavily drinking every day.

Eric Zelman - **52:12**

Oh, man. Chevy worried about you.

Luis Sampaio - **52:17**

So I didn't really get the rest. I should have. And I think my brain is not working because I'm not sleeping properly. Sometimes I'll just get a foggy brain. I think is lack of sleep. I just need to get back into exercise, but it's really hard with my knee. But I need to go back to the gym or something like that, you know, I think.

Eric Zelman - **52:45**

I don't know if I spoke to you after Alfonso took it. I saw Fonso like a month or two months ago when he was here, and I went out to dinner with Alfonso and. And Ravi and Alfonso. I was like, how you doing? He's like, oh, I've been, you know, getting. Everything's been getting a lot better. But then this is like, you know, six or eight weeks ago. You've probably talked to him since. And he was like, yeah. And then one day I was like, think he was telling me that he was either getting up to go to the bathroom or he was coming back from the shower. And I was like, oh, man.

Luis Sampaio - **53:17**

Yeah. Yeah. With me. Happened. I was just walking and I stepped. I stepped up to a curb, and then my knee went now. And I'm like, how? Yeah, it's just. It's just age. I think it's just age, dude.

Eric Zelman - **53:33**

You gotta do. I haven't. I bought them, but I haven't done them yet. But. But I bought all those resistance bands. I did all that, like, physical therapy last year. And I'm like, you know, I want to get my. My balance better. So I feel like what I should do is I'm sitting right now, but I feel like I spent so much time sitting and I need to just be standing. Using resistance pads.

Luis Sampaio - **53:54**

That should help. That should help, but, yeah, walking. So yesterday I went in for a walk. Today I wanted to go for a walk as well, but I didn't find time. I'm going to start walking at least 2km per day. Then I'll maybe increase it to 3, then to 4, and then 5 and 5 is enough.

Eric Zelman - **54:17**

It's a lot of time to like, 5. A 5k walk takes a while. So it's like. I think it's a good thing. I mean, I was doing it for a while, but, like, it's. It's.

Luis Sampaio - **54:26**

It's a lot of time. Yeah. But if I. If I'm able to do 3km per day of walking, I think I'm fine.

Eric Zelman - **54:33**

Yeah, I mean, I think, I mean, you could look at that way or like, you know, like, just build it up and just think about in terms of steps, you know, if you can get to, like, 10 or 15,000 steps a day, you're probably going to be okay.

Luis Sampaio - **54:46**

Yeah.

Eric Zelman - **54:48**

You know.

Luis Sampaio - **54:49**

Yeah.

Eric Zelman - **54:51**

You know what Alyssa said to me that it's pretty funny. It's like she heard someone make this quote that the fitness wearables, like the Apple Watch and Fitbit, basically make you into the Tamagotchi.

Luis Sampaio - **55:06**

It's true. It's true. It's controlling you. But, yeah, I want to get like, I. So I have an Apple watch.

Eric Zelman - **55:13**

Yeah.

Luis Sampaio - **55:14**

Yesterday I did 2.5km. I want to do three at least five times a week if it's not raining. Like, if I have no amazing excuses, I. I really want to do it.

Eric Zelman - **55:29**

Cool.

Luis Sampaio - **55:30**

Let's see, let's see. But I think walking will help me with my knee, with my circulation, with my brain.

Eric Zelman - **55:39**

Yeah.

Luis Sampaio - **55:41**

I'm finding it hard to focus. I think I'm not the same Lewis. You met Eric. No, I'm definitely. I'm not as quick at thinking like I was before.

Eric Zelman - **55:58**

I, I, As a friend, I mean, like, I worry about you. I worry about, like, Michael, and Michael's a different beast. But I mean, you have so much responsibility on your shoulders, and I, you know, I. I just hope that you find, like you have this great energy, you know, and you're of all this, like, I don't want. I don't want to see them suck it all out of you and beat you up.

Luis Sampaio - **56:22**

Yeah.

Eric Zelman - **56:22**

It's just like, I mean, like, because I know that. I know that. I know that you know, it's like you need the job. I'm not saying you don't need the money.

Luis Sampaio - **56:32**

Do you know that? So I've recently broke up with my girlfriend.

Eric Zelman - **56:37**

Wait, that was the one that you start. But, but when did you start seeing her? Because you, I think you told me that you were seeing her when I saw you. So it was like. It was like six or eight months you guys were together or it more.

Luis Sampaio - **56:50**

It was just that I kept it quiet.

Eric Zelman - **56:52**

Oh, she was she the woman in Brazil?

Luis Sampaio - **56:55**

Yes.

Eric Zelman - **56:56**

Oh, yeah.

Luis Sampaio - **56:57**

So when we broke up, she said, this is all due to Bob. This is Bob's fault. Oh, my God. But it's not. It's not. I think so. I think is not Bob's fault. I think the problem is because I'm So scared of losing my job. I over read what Bob says.

Eric Zelman - **57:29**

Me too. That's like. I think. I think I was 100 that way. I was. Yeah.

Luis Sampaio - **57:36**

So. And because I over read it when I went home or when were talking on the phone and she wanted to talk about her stuff, all I could talk about was Bob. Bob this, Bob that. So Bob said this. What does that mean? What does that mean? So, yeah, when we broke up, she said that to her. That was one of the big reasons.

Eric Zelman - **57:59**

But, man, why I used. I mean, I've told you this. I used to feel that way about Pat Welch, you know, like for so long, Patience. Because Pat had fired me at the company that I was at before Big Tin Can. Then he rehired me at Big Tin Can. So it was like, it was sort of soft firing. He pushed me to a different department. But I was like, I had such PTSD because I was like, which, like, does he like me? Does he not like me? Like, and it was, it was awful.

Luis Sampaio - **58:26**

And so when I was scared and then I was telling you, yeah, this is not good. There's too many managers and stuff like that. You sounded so confident that things were going be okay.

Eric Zelman - **58:41**

Were you not confident before I left, before I got laid off?

Luis Sampaio - **58:46**

Yes.

Eric Zelman - **58:46**

I was just. I think I was just. I think I was just parent. I mean, I wasn't trying to be just fake or to. But I think I was really, really nervous. I mean, I wasn't sleeping and I lost like, I lost so much weight when Big Tin can got bought. I mean, it was stressful before, but then I was like, man, you know, I just, like, I just. I've never heard of any company that had a good experience being bought by private equity. Yeah, right.

Luis Sampaio - **59:19**

Yeah.

Eric Zelman - **59:20**

So I was like, how do I try to make the best of this? That's why I started spending all that. That's why I got someone who reminded me of Bob to be my career coach at first. This guy Todd. Because Todd is this guy who's in his 60s, who is a. Not a very different guy than me, started his career and like the military. He then became like a health care. Not that Bob's military, but like this very corporate, like very traditional corporate C suite vibe. Right. And. And I didn't. And I needed to like someone to train me because I was so afraid of like, what did I just get? You know, what's going on here? How do I survive this?

Luis Sampaio - **01:00:04**

Oh, I'm last. Last week I was talking To Tiffany. So last week, there was people being laid off.

Eric Zelman - **01:00:13**

Yeah.

Luis Sampaio - **01:00:14**

No one contacted me to talk to anyone in my team. I was talking to Tiffany and I was like, yeah, Tiffany, I think. I think it's my time now. And she started laughing. And I'm like, how can you be so confident?

Eric Zelman - **01:00:30**

Yeah, I mean. I mean, and. And I had.

Luis Sampaio - **01:00:33**

Had.

Eric Zelman - **01:00:33**

And, like. And I don't want to make you feel better or worse, but I've had so many conversations that were exactly the same, not necessarily with Tiffany, but with other people, because no one knows. You can never. You just don't know. You. You know, like, you don't know. I mean, like, I talked to Maggio, and he was just like, you know, if you're Or. Or Don Whalen. Right. These two guys were telling me, you know, when I was talking that they. They killed their number. Right. In sales. So about the only people who I think are safe are people who are killing their number in sales because they need. The company needs revenue. Right. So if you're in sales and you're doing really well, I mean, I'm not in their shoes, maybe they're nervous, too. But I'm like, you're probably safer than everyone else.

Luis Sampaio - **01:01:23**

But it's like, for that quarter.

Eric Zelman - **01:01:27**

Yeah, exactly.

Luis Sampaio - **01:01:29**

Numbers.

Eric Zelman - **01:01:30**

Totally.

Luis Sampaio - **01:01:31**

No, I remember.

Eric Zelman - **01:01:33**

Yeah, I remember. I saw this stuff. I mean, Apple was different. It wasn't private equity. But I remember, like, years and years ago, when I was at Apple, one of the schools in one of the colleges in Boston, a music school, they, at the time, this was like, a big deal. Back in the early 2000s, the school approved it so that every student had to buy a Mac laptop for. For doing music production. And now that's pretty common because, like, they have all the music tools, all the, you know, digital audio workstations are all done on Mac. So it makes sense. Right? But back then, that was like a new thing. So that's great. So every student has to have one. But you know what Apple did the next year? They doubled the quota.

Eric Zelman - **01:02:16**

How do you double the quota when you only have 3,000 students? Do you sell them a second laptop?

Luis Sampaio - **01:02:26**

Yeah. Nice. Crazy. It's crazy. Yeah. But like I said before, I don't blame Bob. Bob is someone just like everyone else, just a human being like everyone else. But if he has to fire me, he will.

Eric Zelman - **01:02:45**

So. So one of the things that my scraper does, right, is that I didn't just, like, you know, part of the way that I look at FIT for me is no pe, so it digs into everyone's funding to understand whether any of them are backed by private equity.

Luis Sampaio - **01:03:02**

Okay.

Eric Zelman - **01:03:03**

You know, because that's like a, because I have like certain things which are flexible and certain things that are disqualifiers, hard disqualifiers. Private equity is one, you know, unicorn. Like, I don't, I mean, I just don't. It's not that I wouldn't like a big company to pay me lots of money to work there. If I, or I get a job, I need a job. I'm not trying to say that, but I just don't think that I'm a good fit. I, I don't, I think I'm wasting my time trying to apply to companies that are valued at like 500 million or a billion dollars. Right. Oh, I think, I don't think I'm going to get that company to want me. So I was like, just put those off to the side. But the one that pretty much the hard stop for me.

Eric Zelman - **01:03:46**

I mean, there's some cities I wouldn't move to. You know, there's some cities I would, there's some I wouldn't like. I applied to, I applied to a bunch of. I had a pretty good job interview with a company in the uk. I was super. I mean, it was to move there, but this is a London based healthcare company. I'd love to live, I'd love to. You know, anyone who's willing to take me, anyone who's willing to hire me to work in the uk, I'm there.

Luis Sampaio - **01:04:10**

Yeah, well, let's see how things go for everyone now.

Eric Zelman - **01:04:16**

But yeah, it's hard to know.

Luis Sampaio - **01:04:20**

No, it's not fun. It's not fun. And this Iran's war is getting me really nervous. Even more than Russia, than the Russia, than the Ukraine war.

Eric Zelman - **01:04:37**

Trump is, you know my feelings. He's an idiot and this is just so stupid.

Luis Sampaio - **01:04:41**

Yeah. Before I didn't think he was that much of an idiot and that he was just thinking about how to make money and stuff like that, but now I'm really starting to think he's an idiot. Like how? I mean, like how? I don't know. I don't know. It's just crazy.

Eric Zelman - **01:05:09**

I just, what I don't understand is that like he's gonna, he's. So he goes and bombs all this stuff and he spends hundreds of billions of dollars bombing them and then he disrupts, you know, all this, you know, the oil and air travel and all this stuff. Right. Disrupts the world economy. But he hasn't gotten rid of Iran's enriched uranium. He didn't do nothing. That hasn't happened. And there's no sign that their government, I mean, their government is like in shambles, but there's no sign of, like, people suddenly take overthrowing. So I'm like, what was the point of all of this?

Luis Sampaio - **01:05:52**

Exactly, exactly. That's how I feel. And I think were going into the right direction. I think if interest rates continue to go down, probably US Companies especially would start hiring a lot again.

Eric Zelman - **01:06:10**

Yeah.

Luis Sampaio - **01:06:11**

But if they continue to go up, hiring will not stop. Sorry, hiring will not start as it was before. And people just blame AI for cutting jobs. When they want to cut jobs, they'll just say, yeah, say I, yeah, Trump, I don't get him. Like, I know

he's not a good person, but I didn't think he was not smart.

Eric Zelman - **01:06:43**

Oh, so you just thought he was. You just thought that he was just a really selfish person who was pretty smart. Like, he knew how to, like he had he. How to, how to get what he wanted.

Luis Sampaio - **01:06:55**

Well, not pretty smart because I think people in his cabinet are smarter than him. Like the Marco Rubios and these guys, I think they smarter than him, but I didn't think he was this done.

Eric Zelman - **01:07:11**

Yeah, I, I don't, Dude, I don't want to sound I told you so, but I.

Luis Sampaio - **01:07:18**

Well, I'm not saying I supported him because I never supported.

Eric Zelman - **01:07:23**

No, I know, but I just think that, I think that America wanted to elect an idiot and that's what they got. And so I don't look at it, I don't look at Trump being president because as he's so smart, he figured out how to, you know, be the president or something. I think of it the other way around, which is they were going to elect some complete idiot who was just going to tell them what they wanted to hear.

Luis Sampaio - **01:07:54**

Yeah. So my view is they wanted to hire a macho man.

Eric Zelman - **01:07:59**

Yeah. And he was ma.

Luis Sampaio - **01:08:02**

There's macho mans that are not idiots. I mean, like, let's say, let's say there are. That are not idiots. They are just. But they are smart people.

Eric Zelman - **01:08:17**

No, I mean, look, I, I'd argue that Zelensky, I don't know that I'd want him. I mean, I don't have an opinion of him as, like, how would he be his US Leader? I mean, that this is like, you know, that's not like comparison. But I mean, that guy has spent what, five years, six years now basically being in the Crosshairs of Putin fighting that war. You know, like, he, I mean, Trump could never do that. He doesn't have the. He doesn't have the stamina for that. I mean, also because he's, like, 80, but, you know, he's just. He's a guy. He's a guy who thinks he's entitled having a gold toilet and has a hissy fit. If not, you know, if, if, if whatever. If he doesn't get the right ketchup for his French fries, I mean, he's just. I don't know.

Luis Sampaio - **01:09:08**

He's just destroying, you know, economy. That, that's. That's how I see it. He's destroying the economy, and it's affecting my life. If he wants a gold toilet, I don't mind. Can even be a diamond toilet.

Eric Zelman - **01:09:23**

But Alfonso was laughing. He was just like, he was like, Trump is a lot like the guys who ran Angola.

Luis Sampaio - **01:09:35**

He is. But I'd say that the guys that run Angola are smarter because the guys that run Angola, their goal is still.

Eric Zelman - **01:09:46**

It's a pretty low bar, you know?

Luis Sampaio - **01:09:49**

No, they're not that bad. They just. It's not a democracy there. No, I know it's not a democracy there. So it's a whole different game. Yeah, Trump. Trump is really pissing me off lately.

Eric Zelman - **01:10:05**

Yeah. I mean, I think that's how a lot of people probably, hopefully a lot of people feel. I hope that they're like, why is he up our jobs? Why is he, you know, screwing up things, you know, making it harder for people to live, you know? Like, I mean, I think a lot of. In the States and you read a lot about, like, people who are, you know, love him, but then there's also these people who voted for him who are just like, you know, like, I mean, and some of it is just. I mean, again, they inflicted on themselves. I, I don't feel sorry for them. Like, these people who are farmers, who rely on, frankly, undocumented labor who knew what they were electing, and then they complained that they don't have enough people to work on their farms.

Eric Zelman - **01:10:51**

And it's like, well, what did you think was gonna happen? You, You, you voted for that, you know?

Luis Sampaio - **01:10:59**

Yeah.

Eric Zelman - **01:11:01**

So, like, there are a lot of dumb Americans, and Trump is one of them.

Luis Sampaio - **01:11:08**

Yeah, I, I, I had no idea. I had no idea he was this done. I had no idea because on his first term, he was just selfish, looking out of his own for him. But now it's like he just wants to destroy the world economy that's how I see it.

Eric Zelman - **01:11:32**

Yeah, I think he does. I think he does.

Luis Sampaio - **01:11:34**

I think.

Eric Zelman - **01:11:35**

I think that. I think that for him, like, everything is a real estate transaction. It's like when he thought about, like, he doesn't want to deal with problems. He just wants to, like, get rid of Gaza so he can put a golf course and a hotel on it.

Luis Sampaio - **01:11:51**

It's a good area next to the sea. Beautiful. I don't. I don't. I don't get him. I don't get him. Okay.

Eric Zelman - **01:12:05**

All right. Well, that was good. I hope that. Hope that you got some anxiety out, but. Yeah, no, like, I. I wish I had a. I wish I could. I. You know, I have all this free time. Just don't have any money right now to come over and. And have a pint with you. So.

Luis Sampaio - **01:12:22**

I'll be. I'm coming to Chicago the 13th. Going to Chicago.

Eric Zelman - **01:12:28**

What's. What's. What are you guys. Why. What is there, like, show pad?

Luis Sampaio - **01:12:33**

Yeah. Rko. I don't really know what it stands for, but retail.

Eric Zelman - **01:12:38**

Retail Kickoff. That's their sales kickoff.

Luis Sampaio - **01:12:41**

Oh, yeah. They. They doing it. And they. Bob is saying that I need to be there to pass confidence to them that we're there to solve their problems and to help them sell and stuff like that. But yeah, I'm the only support guy. Then.

Eric Zelman - **01:13:02**

Chicago. I mean, have you been to Chicago before?

Luis Sampaio - **01:13:05**

No. So I'm happy about being in Chicago.

Eric Zelman - **01:13:11**

Do you guys have, like, an ex. Do you guys have, like an extra day or any time, like, to explore?

Luis Sampaio - **01:13:17**

So they didn't give us an extra day. But my ticket is flexible, so I'll change the date and I think I'll pay for a hotel, stay there maybe two or three nights. And so I have time to cool. See the city. And I'll try to convince Alfonso to do the same. So I have company.

Eric Zelman - **01:13:39**

Awesome. Yeah. Yeah, Chicago's fun. The reasons I like Chicago might be things that you and a Fonse don't give a crap about. Like, I like going to see baseball. They have a great baseball field there. I. I've always had great eating experiences in Chicago. So there's a lot of amazing restaurants. I mean, you know, it's the third largest city in the US So it has a lot.

Luis Sampaio - **01:14:04**

Really?

Eric Zelman - **01:14:05**

Yeah.

Luis Sampaio - **01:14:05**

Wow.

Eric Zelman - **01:14:06**

Yeah. New York, Louisiana. And then Chicago.

Luis Sampaio - **01:14:10**

I think I still.

Eric Zelman - **01:14:12**

I think that's still true. I think Houston is getting big. Or maybe Houston's bigger now, but I think it's Chicago still number three.

Luis Sampaio - **01:14:21**

Let's ask Chachi. Pt. Yeah, we Live in the AI world now.

Eric Zelman - **01:14:39**

Yeah, man. I mean, yeah.

Luis Sampaio - **01:14:42**

Chicago is number three.

Eric Zelman - **01:14:43**

Yeah.

Luis Sampaio - **01:14:45**

It's New York, Los Angeles, Chicago, then Houston and Phoenix.

Eric Zelman - **01:14:50**

Yeah.

Luis Sampaio - **01:14:52**

Wow. But New York is double Los Angeles. It's huge.

Eric Zelman - **01:14:57**

It's huge. Yeah.

Luis Sampaio - **01:15:00**

Huge. New York is really cool. Okay, Eric, I'm gonna jump off, see if I eat something.

Eric Zelman - **01:15:09**

It's late. Go. You're doing.

Luis Sampaio - **01:15:12**

Yeah, but I. I haven't eaten yet. Are you. Are you gonna send me the link on message? Yeah, yeah.

Eric Zelman - **01:15:19**

I'll send. I'll send. I'll send it to you. You know, send it to you shortly with the instructions. And. And there's a. There's a readme. And, you know, if it breaks and I'll.

Luis Sampaio - **01:15:32**

And I'll let you know when it's done. Do I have to do it all in one go or can I do it in chunks? Will it save. Does it save progress?

Eric Zelman - **01:15:39**

It should. I think you have to keep the window. I. That's a good question. So I would say is just keep it as.

Luis Sampaio - **01:15:46**

I'll find out.

Eric Zelman - **01:15:47**

Keep it as an open tab. Yeah, I think if you keep it as an open tab, it doesn't have. There's no login for it. So state is all saved. Browser. Browser side, you know.

Luis Sampaio - **01:15:59**

Yeah, I'll. I'll let you know how it works.

Eric Zelman - **01:16:06**

Yeah.

Luis Sampaio - **01:16:06**

Cool.

Eric Zelman - **01:16:08**

Awesome. Thank you so much for your time.

Luis Sampaio - **01:16:10**

Thank you, Eric. Thank you for thinking about me as well.

Eric Zelman - **01:16:12**

Oh, all the time. Bye, man.

Luis Sampaio - **01:16:15**

Bye.
