David Keane - **03:28**

Oh, my God, it's Eric Zelman.

Eric Zelman - **03:30**

Hello, David Kane. How are you, sir?

David Keane - **03:33**

I'm fine, I'm fine.

Eric Zelman - **03:36**

Thank you for your time. I, I'm excited to try to explain that I have this gadget and I want you to know that I, I take your word that, that there is no moat very, very seriously. So, you know, with that in mind, here I go.

David Keane - **03:54**

All right, what have you got? What have you got? Tell me what's your, what's on.

Eric Zelman - **03:57**

Yeah, yeah. So, so basically, let's get this deck going here.

David Keane - **04:06**

Let's have a look.

Eric Zelman - **04:07**

Yeah, me and my keyboard. All right.

David Keane - **04:12**

It's funny, Eric. I've become such a fan of Google Meet now.

Eric Zelman - **04:16**

You know, I, I generally don't mind Google Meet, but what I had this experience early on with the free version of Google Meet that Google Pre basically makes a noise cancellation of Premium. So if you were using the free Google Meet, everyone had these horrible echoes and it just killed me. So I might move over to Google Meet. I mean, good point, you know, Good point. But I'm paying for Zoom, so I mean, you know, it's not like I could pay for Google Meet just as well.

David Keane - **04:51**

It's interesting, isn't it? I remember that when, at first, when web based video conferencing first came out, there were a lot of issues. It's amazing how it's matured.

Eric Zelman - **05:01**

Yeah. I mean, I think I told you the story in I don't know, 98 at Apple, we, I tried to pitch the marketing team on doing webinars and so we decided to do it, but my job was to find the vendor to do it because. Yeah, and we would do them. They were regional. So this was out of the New York kind of marketing market center at the time. And we had this guy who had, I forget the name of the company. Startup, but you know, it was the Solaris based thing, right? And we invited a few hundred customers. We had about, I don't know, 50 or 75 people in the room and it crashed. And you know, I'm like, whatever, 28, 29.

Eric Zelman - **05:49**

And this is like, you know, so my manager just screams at me the next day and we bring the guy in and I'll never. This was one of the best. This is next to meetings I've had with you and Pat, this is one of the best instructional, informative ways of managing a vendor. The very first words out of my manager's mouth to the vendor was, you

know, we brought you here to tell you that we're not, we're never going to use you again unless you do the following things.

David Keane - **06:23**

Wow, it's interesting, isn't it?

Eric Zelman - **06:26**

Yeah, it was interesting. I mean, you know, were going out of Apple was going out of business at that point and you know, it was like how important are is was this to the vendor? Who knows? All right, so.

David Keane - **06:39**

Wow.

Eric Zelman - **06:41**

Yeah, so. So my job search over the since. Since June has been really frustrating for a variety of reasons. But one of the things that has come to the forefront for me is that I needed to create tools for myself to find signals for early stage startups. Because if I want to go back to the Eric Zellman who worked at Big in 2012, that early stage messiness is hard to find. So I needed tools that could help me figure out signals of early stage when they're about to hit the inflection point of needing someone to do customer journey work.

David Keane - **07:26**

Yep.

Eric Zelman - **07:27**

Right.

David Keane - **07:28**

Yeah.

Eric Zelman - **07:29**

And how do I surface that? How am I going to do that? How am I going to go about that? So, you know, as you would imagine, this became this massive project for me, or not massive, but this vibe coded project of scraping about 40 or 50, 75 VC portfolios.

David Keane - **07:48**

Yeah.

Eric Zelman - **07:49**

And ingesting, you know, I don't know so far, a few thousand, maybe three or four thousand startups. Startups. Right. Because VC portfolios will have, you know, something they funded, I mean, you know the whole story that something they funded last month and they'll also have their portfolio listing how they spent, you know, whatever to fund Meta or Anthropic. So there's a lot of.

David Keane - **08:11**

Yep.

Eric Zelman - **08:11**

You know, so. So my thought was though that for me to find what I wanted, it was beyond just finding the company but it was also positioning myself and figuring out the through line in my career as a builder and as this sort of 0 to 1 first customer person and that I'm probably not that person for a 300 person company, but I think I'm great at that job for a 10 person company, for a 50 person company. That's where I want to be. And I think I've said this to, I think I said this on last time I spoke to you, I was joking with one founder of a small shop and I said, you know, if you see me working for a company of a thousand people, it's probably a bad fit. Yeah, I mean I shouldn't be there.

David Keane - **08:57**

Shouldn't be there.

Eric Zelman - **08:57**

Yeah, shouldn't be there. So What I was thinking about is that I needed to create a document for myself that could interrogate all these opportunities that had not only my resume, but all my requirements, all my goals, my salary, where I want to live, where I don't want to live, what kind of jobs I'm good at. Like for instance, you know, what kinds of healthcare technology jobs I could do versus others that are outside my space. And so this started to grow into this idea of a structured document that was way beyond what a resume could ever be, and it was way beyond whatever LinkedIn could ever do.

Eric Zelman - **09:36**

And so what I built is basically a document and a way of creating scores and weighted measures for things that are important to me in my job search so that I can interrogate these companies and see where I fit in. Like, am I a fit for them? Because it isn't just knowing the seed round, it isn't just the enrichment from knowing what sector they're in. I mean, I do enrichment even to figure out what the customer Persona is. Because, you know, for me, being customer success, I'm customer success for B2B and you know, enterprise business, I'm probably not going to be the right customer success person for biotech. Yeah. You know, so I had to understand who are they selling to. So there's all these enrichment layers that go into it.

Eric Zelman - **10:25**

And you know, I know you've done this a thousand times, so what I was thinking is that this also then this idea of having a way of interrogating and looking at the job market for me, whether it be VCs or scraping even job boards to interrogate, you know, actual job postings for maybe a B round or C round companies, works in two directions. So there's the customer, the candidate. Right. There's the person, but then there's also the company.

David Keane - **11:02**

Yeah.

Eric Zelman - **11:03**

And so I think that this is, this is my thesis that ATS great. You weed out whatever number of people who, you know based on this keyword. Bingo. Right. But then what do you, how do you then analyze and understand? What do you do with the next 300 resumes, 200 resumes? How do you work through that? How do you have a sense of what that person's values are? And how do you find someone who's really going to fit what you need through all that noise?

David Keane - **11:37**

Yep. Right. Agreed. Very tricky.

Eric Zelman - **11:41**

Yeah. So my thought is building, you know, basically an AI discovery system of building out this markdown file of taking in assets from the user, taking in their resume, taking in their recommendations, taking in Their disk assessments, taking in their360 exams, taking in their code portfolios, taking in their graphic design portfolios, taking in their. Their. Their TED talks. Because all of this can be synthesized into a profile. Whether it's anything you can, Anything that you can give to anthropic, you can put into this file. And so my thinking is that for me, as a job looking for a job, that it isn't just about sort of finding the first thing, but it's also about finding the right fit. So if I can find the right fit, I'm happier.

Eric Zelman - **12:31**

So I want to enrich a file that knows as much about me as possible beyond just, you know, Brian was saying. He was. He went to one of those. I think I made this joke with you, but it was sort of true. He went to those who's that? Tony Robbins seminars. And Tony Robbins told everyone to go spend, you know, 20 minutes and write a page about who they are. And I think that's a great idea. What I'm doing. Is that on steroids. Just, you name it. So, so I built an a. I built a chatbot, basically, that goes through and analyzes all these different factors for these people and basically starts a conversation with them to enrich this file and create this file. And this could sit on both sides of. Of the process.

Eric Zelman - **13:26**

So this could sit for the HR person who needs to really understand, is this person going to fit with that manager, with that team, with those requirements, with those goals? Because jds, you know, I mean, they're a mess. Right. So there's a lot of interrogation and a lot of analysis that can happen on both sides. And then this built a scoring model, and it built this idea of a multivariable matching system, which I then went and got a provisional patent for last week because no one else was doing this. And there's probably good reasons why.

David Keane - **14:04**

I mean, no one else is doing this is a very big call. But still, I get the idea. So. So I'm starting to get the idea. So the idea is a matching system.

Eric Zelman - **14:13**

Yeah.

David Keane - **14:13**

And how matching based on what? Matching is a wonderful word, right? Matching is a wonderful word. But matching. Is there any two ways to do matching, which is similarity. So you've got a similar score, which is really what vector search is all about, is a similarity. Similarity score.

Eric Zelman - **14:37**

Exactly.

David Keane - **14:38**

Or you've got some textual matching where it's not doing a conversion to some vector space. It's literally just saying is the same word used. I mean, that's what matching normally is.

Eric Zelman - **14:52**

No, and it's the Vector. It's the vector idea. It's the idea that this is a lens. And like the lens in a metaphor of photography, you can have a wide angle lens that captures all sorts of things and brings them in. And then you can also have a telephoto that brings you very close and narrows things down at a very macro or micro level. Right. And, and that the, that both parties can interact with this. And in what I've built, the candidate can interact with this as a general kind of wayfinder. I mean I, you know, man, what.

David Keane - **15:28**

Does, what do all the job search companies do? Because they're all doing this as well. When you go to. Indeed. Or all those things they're not doing.

Eric Zelman - **15:38**

They're really actually not doing this very much because what they're doing is they're ingesting your resume and they're looking for keyword matches title and to the jobs that you've had. And so in the marketplace right now, there's one company that was seeded with 20 million bucks in December.

David Keane - **15:55**

Wow.

Eric Zelman - **15:55**

That does something similar to me. But they don't do it anywhere as deep as I go. They're called Jack and Jill and it's an AI chatbot that basically lets you build signals out from your resume to interrogate a very, you know, I mean they have 20 million bucks. So they have an incredible whatever search engine that brings you all the jobs from Lever Ashby rippling and sucks them all in and then uses your resume.

David Keane - **16:21**

And one of the problems I, I've seen too, and I wonder if you've got a way around this. One of the problems I've seen in the real world is the websites that have the content are stopping you from taking it.

Eric Zelman - **16:36**

Yeah, they are.

David Keane - **16:38**

They're trying to stop you from taking it.

Eric Zelman - **16:39**

And LinkedIn is the biggest culprit. But you know, these days exist in other ways. So my theory here and where this is going is that for this to be a useful tool in the marketplace, it's great to have it as something that for instance, for me, someone who's been heads down like, look, big tin can, you need me to do something, I did it. You, there was a problem, fill it. Right. So that's not a career strategy. That's, that's an, that's a innate way of being or working. Right. And I think that there are people who would never ever need this kind of tool to see their career through. Line, for instance. Okay, Pat Welch. I'll use Pat as an architect here. Pat would just say I wouldn't need this to evaluate whether someone's a good salesperson.

Eric Zelman - **17:32**

And I wouldn't need this to understand my own career.

David Keane - **17:36**

But I think at scale. You don't know at scale. I mean, that's because Pat, if Pat was. Had to hire 100 people in six months, he might need that, Eric.

Eric Zelman - **17:43**

He might need it. And, and. But I'm just saying that there are people who will look at this and say, why would I ever buy. Like, we're all. You and I are old enough to remember that. That in the 70s, everyone bought that book. What Color is My Parachute?

David Keane - **17:56**

Yeah.

Eric Zelman - **17:57**

Right. So this is the AI version, in a way. It isn't based on that book. But the parallels, everyone who's seen it, who's over the age of 40 has said, hey, did you read that? So what I think is that on the company side, this is where it gets

really interesting. Because then it isn't just like, for instance, I'm trying to interrogate these shops, but what happens if they get 100 resumes, a thousand resumes of all these people saying, hey, I'm a good builder, of course. And, you know, like, all these things, garbage in, garbage out. So, you know, I don't think that just by giving someone a disc assessment as part of a job interview, which actually happened to me once, which was wild because they screwed it up so badly. It was one of those, you know, those assessments.

Eric Zelman - **18:47**

And I had one that I did after I left Big Tin can that completely changed how I looked at assessments. Because I have to admit that during the time when we spend all those money on those assessments, I would do them. But I think psychologically, I was always like, what does the job need me to say? Yeah, of course not. Not who am I Totally. When I step back. When I step back, and I did one in July with a coach. It was wild how close it was to me, not only in terms of seeing the public Eric, but the private Eric and. And me trying to figure out, okay, well, what's the through line? Because that through line is really what's going to, ideally, I think, make me happy in my. In my jobs. Right?

Eric Zelman - **19:32**

I need those things to be the same versus divergent. Okay? So this opportunity here is also that coaching drives this. Coaching is the key part of this. Because if you come to this analysis process, you expect a chatbot to do everything. It's never going to be as good. I spent six months, you know, thousands of dollars with two different coaches. One that I got. I don't know if I told you the story but one that I got when Vector came in. I hired a coach who was a healthcare VP, guy in his 60s, very different from me, probably more in the profile of Bob or Pat, or. Not the homegrown kind of organic person, you know, I'm not saying they're not, but. But just people who have had a particularly determined career paths.

David Keane - **20:29**

Yeah, I totally get it. Yeah, I totally.

Eric Zelman - **20:32**

And I wanted that because I needed to understand how do I survive in this unknown world where no longer is it me calling David a Pat and saying, what do you guys want to do?

David Keane - **20:40**

I tell you, Eric, it's so interesting because you can't go back in time, but unfortunately, when I lost control of the company, which I did, then it's weird because if we'd just been able to keep going, we would have converted it to an

AI company properly. I tell you, we would have. We had the best chance ever to do it and. But, you know, lost control, couldn't do it.

Eric Zelman - **21:07**

Money is money and you can only steer the ship for so long. And you know, at some point, you.

David Keane - **21:11**

Know, I learned a lot of lessons that. Anyway, let's not talk about that. We need a drink. Talk about that. So show me. So what have you got? So I get the idea. I'm sort of getting the idea.

Eric Zelman - **21:20**

Yeah. So. So the last couple things, coaching, I think, is a big part of it. So I think there's an opportunity in this kind of future, this product to be coach driven. So. Coach driven AI discovery. Because one of the things the coaches told me is, look, people can't afford 200 an hour, so I need a tool where I can put my voice in and help them figure out their through line. And, and that there's an opportunity there. And, and this is the idea. So the moat is not the idea of a chatbot, but it's the data points that are collected through this process. Right. The mode is the depth. And so what Jack and Jill does is very superficial. And what I do is I go deep.

Eric Zelman - **22:07**

And so Jack and Jill is a useful tool and I've even used it to find jobs that I've applied for. But what I'm doing goes farther down. There was a company called Square Peg that tried a simpler version a few years ago and it didn't work. And they didn't have. They didn't have what we have here in 2026.

David Keane - **22:27**

Right.

Eric Zelman - **22:28**

Okay, so what do I got? So here's what. Let me show you what I got.

David Keane - **22:33**

So.

Eric Zelman - **22:35**

So the all the back end of all this is that here's those 3,000 VC companies that have.

David Keane - **22:43**

So where did you get. So you're saying your system is running a daily job to find these companies and you're running with, you're running a search to find them.

Eric Zelman - **22:53**

Right. So what I have is that I've built out very complex multiple pipelines and very complex or AI chatbots in Nathan in an orchestration layer that is doing all kinds of enrichment against these companies using tools like Brave or Anthropic.

David Keane - **23:12**

Yeah, sure.

Eric Zelman - **23:12**

On multiple points to go in and figure out the data points that I need and extract those and then dump them to airtable.

David Keane - **23:19**

All right, so first things first. Starting off with let's find the people. That would be your goal here is find the people that are funding new businesses. That's what we're looking for.

Eric Zelman - **23:30**

Funding, right, funding. Now I'm also scraping the SEC filings. So I built a scraper for that goes to the sec. So every time that anyone files with SEC on a daily basis, it goes out and figure, tries to figure out, is that a company Eric should talk to?

David Keane - **23:47**

Okay, got it. I got it. Yeah, I got it.

Eric Zelman - **23:50**

And so this shovel could be anything.

David Keane - **23:52**

And it's very interesting you say Eric should talk to. So I think the personalization is really interesting. So what you're saying is that you're running that in a personalized way, not just a general way.

Eric Zelman - **24:07**

Right. So, so here's the, here's a bit about how I'm going about the testing and thinking about. So there are people who are very adjacent to me who will love this. For instance, Ravi Katem. Yeah, right. Because I'm looking for early stage companies, I'm looking for customer success roles. Ravi and I certainly have different capabilities and he has a much deeper, longer term enterprise CS overall, but nonetheless he could literally use the same pipeline. What I envision in the future is people will be in different pipelines because, you know, I mean, there's different industries. And so the shovel could be a variety of things. And so look, you know, between browser lists and all these enrichment tools, you can scrape a lot of stuff. There's some things you can't scrape, right?

David Keane - **24:54**

Yep.

Eric Zelman - **24:54**

But you can get access to a lot of things and there are a lot of signals that you can find that I think otherwise I don't easily know how to find. If I had a lot of money, I would just throw a lot of this at something like Crunchbase because there are premium enrichment services that might be faster, but or deeper. I'm also using this to analyze job boards. Right. Things like indeed or. Or work at a startup or, you know, and you can get.

David Keane - **25:20**

Indeed in. You can actually. Obviously you're right. You can't get LinkedIn. It's very hard to get LinkedIn.

Eric Zelman - **25:25**

Can't get LinkedIn, but you can get a lot of other stuff. And it goes in and basically I can get it to build out. Are these builder or maintainer roles? I mean, I have hard flags, so my success rate is smaller than what other people would because as you can imagine, one of my hard flags is I will not work for a PE shop. Right. I hope none of us would. Yeah. Right. So, I mean, I know they're blended and it's not as black and white as that, but nonetheless. So what this, this process.

David Keane - **26:01**

Don't worry, Eric. They're in deep too. So. Don't worry, mate. They're in deep.

Eric Zelman - **26:05**

Well, yeah, so what this process basically boils down to. I had a really interesting demo yesterday with Jared Hibs.

David Keane - **26:14**

Oh, yeah?

Eric Zelman - **26:15**

Yeah, yeah.

David Keane - **26:17**

So his thing.

Eric Zelman - **26:18**

Yeah, I love his thing. I don't need it. But I was like. When I saw his thing, I was like, I got to talk to Jared because we're kind of guys building their, you know, their tools out here, trying to figure out how to do. How do you get this to take. To do something.

David Keane - **26:32**

Yeah, yeah. So.

Eric Zelman - **26:35**

So what I built is an ingestion form and this goes through, basically, and it takes about 25 to 45 minutes of Q A.

David Keane - **26:51**

Good.

Eric Zelman - **26:51**

And so you dump all your materials in here, right. Your. Your assessments and things. So you can go in and put your, your resume, you know, pick that out and you're going to dump. I mean, I use the term dump, but you're going to enrich this with as much building.

David Keane - **27:18**

You're building some kind of vector database for each person, some entry.

Eric Zelman - **27:22**

Exactly, exactly.

David Keane - **27:24**

And then you're. So that's what you're storing. So you've got a vector database being built with all this information.

Eric Zelman - **27:29**

Yep.

David Keane - **27:30**

Right.

Eric Zelman - **27:31**

And then. Yep. And you're going to go through this and you're going to. I found that, you know, again, if I had actual people with skills versus vibe coding, I might be able to get around this. But I found that sometimes names get confusing for AI, So I figured it would be useful for people to put their pronouns here, context of what they're looking for, if they're actively looking. Because I also imagine that, you know, for Someone like, you know, for a lot of people this might be something they want just runs in the background while they're okay with their job. They're not like actively searching. So maybe their requirements are going to be different in terms of how often they get data back and then it's going to go through a discovery process. Right. And you can imagine where this is going.

Eric Zelman - **28:15**

It's going to go through, it's going to start going through various stages. It knows a bit about, you know, about me from my background. It's ingested all that information. I'm going to skip to the end because we don't have 45 minutes. But, so, but what it's going to do is it's going to give someone. And again I envision this as initially as I just want to validate. Is this a useful tool for a job searcher? Right. So that's my initial validation. Is, is this at some point free or otherwise a useful tool?

David Keane - **28:56**

Yeah, so I'm sure it is. So are you finding that you're able to ingest enough roles to do enough matching? The only concern, the first not concerned. The first question I would say is I love the principle of how you're building up, you know, for someone things that they could do themselves but won't, which is all this information and then are you able to get the roles?

Eric Zelman - **29:31**

Okay, so for myself, the hit rate is low. Right. Because I can find.

David Keane - **29:39**

I don't mean get employed in the role. Sorry. What I mean is are you able to ingest enough jobs? Are you able to find. Because the thing that the challenge will be that.

Eric Zelman - **29:49**

Right now, the way this was built, it was built for me, but it was this idea of could I find thousands of companies and scan those? So that's a checkbox. Can I find hundreds and hundreds of roles? Yes. Do I have what they say, millions of roles? Not necessarily. But it's interesting because I on a daily basis go and look at Jack and Jill because it's the nearest neighbor, competitor, right. And they just got money. So someone thinks this is a viable space, they don't have a hiring tool that does this either. Their stuff is very superficial.

Eric Zelman - **30:24**

And what I see is really interesting is when I try to use their tool and I give it all the information about me and I just really want to max it out because I want to get a job, I find that they're showing me were basically covering much of the same surface area.

David Keane - **30:40**

They're not question how. That's a very good point. That's A so smart. So you can see you're getting pretty much the same roles that they are seeing.

Eric Zelman - **30:50**

I'm. I'm getting, I'm not getting all of it. Again, they have $20 million, but I'm getting 30 to 50% of the same stuff.

David Keane - **30:57**

That's good.

Eric Zelman - **30:58**

And that's an incredible signal from a one person shop versus whatever they are.

David Keane - **31:03**

I know.

Eric Zelman - **31:05**

And also it's also funny that they have put no guardrails in. I started doing coding in their chat bot just for fun.

David Keane - **31:15**

Anyhow, everyone does that. So I'm getting, I'm really getting the idea. Right?

Eric Zelman - **31:24**

Yeah.

David Keane - **31:24**

I'm trying to think about. Here's what I'm seeing when I talk to big companies today. A lot of big companies, there's a current thing where they want to do it themselves, but they can't. Right. So I'm just wondering. And yeah, because it might be the change of the zeitgeist, Eric, is they want to do it themselves. So let's say you were UnitedHealthcare and you're employing thousands and thousands of people. Is there something where you could help the employer side, not just the employee side?

Eric Zelman - **32:06**

That's exactly it. And so that's that. That's that using the lens in the other way to look at the candidates and look at the hiring. And I think that this tool also would have a lot of power for internal promotions because there in that world, you know a lot about the existing candidates. And so you're able to sort of talk about team fit in a much deeper way and figuring out, do you want this person promoted? Do you want them in this different department? Where would they do best? You know, like they started off in support. Should they be in cs? Where should they go? How do I get more information about who they are?

David Keane - **32:45**

And it constantly is updating it from their activities as well. It's so interesting, Eric. Like the first question is, I mean, it's great. I think you've done a tremendous job. I like the ui, well done. I don't know where you got that from, but I think it looks great.

Eric Zelman - **32:59**

I just, I'm a, you know, Alyssa, me, we're just graphic design fans. So I always go back to, you know, Bauhaus, sort of like Swiss international poster design. And I just, you know, that's that.

David Keane - **33:12**

Did you find the template or did you. Did you actually find the template for this?

Eric Zelman - **33:15**

No, I just. No, I just made it up. I mean, it's just, you know, it's just San Serif it's. It's, you know, and then. And then black, white and red are like the principal and some gray, but black, white, and red are. We're always considered the canonical color palette for how things should be done in print.

David Keane - **33:36**

Yeah. No, I think it's fantastic. I think you've done a really. The UI is amazing. Amazing. I'm just trying to think, is it. Is it possible to. In today's world, is it possible to compete with Jack and Jill? That's the first question. Is someone, Eric Zellman, to compete with Jack and Jill? Well, you'd have to try. I mean, the first thing is. Done a lot of work. The first thing you want to do is at least try. I'm going to someone who wants to write a check. Write a check to vacuum.

Eric Zelman - **34:08**

Right?

David Keane - **34:08**

Yeah, I'm looking.

Eric Zelman - **34:09**

I mean, my. I mean, my dream, right, is to get. I mean, everyone's dream is this, but. But to get some cash so that I can continue this project and grow it so that over the next year I can validate this so that I can actually, instead of just having provisional patent, have the real thing. Now, patents don't guarantee. I mean, I, you know. Yes, it doesn't guarantee you can patent anything and doesn't necessarily mean there's a market for it. So, you know, there's that. But I'm looking for validation on the company side. So it's interesting talking todd and James, the two coaches I have. One guy's in the uk. One guy's an American guy who lives in Rhode island, actually. So Todd loved this. He's the American guy.

Eric Zelman - **34:57**

He loved this because he doesn't have any kind of tool that can give him this. And he's been doing coaching for like 20 years. He's got, you know, he's a guy with a. With a master's in engineering and MBA, and he's getting his PhD in psychology, and he. He's a jack of all trades, but he's a. He's a great coach. And he's just. He's been a VP in health care, and he's done all sorts of things. So he has a great amount of experience, and he loves that he could have a tool like this to help him dilute you. Sorry. He loves. He loves the idea of a tool like this to build that through line for James. James felt like, okay, what I really want. And he. And Todd really also wants a way of commoditizing Todd's skills at a lower price point.

Eric Zelman - **35:46**

So Todd, as a coach, wants someone who can give him a chatbot that is Todd distilled to $20 a month or whatever it is James feels.

David Keane - **35:57**

What does he mean by Todd? What does he mean by that? I don't quite get.

Eric Zelman - **36:00**

I think both these guys in talking to them feel that they, that the biggest challenge with coaching right now is that you can't get, you can't fill your pipeline because it's hard to find people who want to pay 200 bucks an hour. Right. So how do you take your coaching brand and put it in somewhere and have a tool for it? There's, you know, Nathan Furley and I were talking about this. I don't want to build one of those job tracking systems. There's so many of them. They're all, they're just. It's a shitstorm. I don't want to build a resume builder. I don't want to build any of that stuff. I just. That stuff is like it exists, it's whatever. I really want to focus on this idea of the matching and the through line of someone's career and the coaching driven discovery process.

Eric Zelman - **36:53**

I'll just put it as like a box that's an opportunity. And could that be that a product has multiple coaching voices so that you could say I'm using Eric's tool because I'm trying to survive a PE takeover? Yes. Could you use Eric's tool because I'm trying to learn more things about myself. Because I'm just trying to like for instance, you know, people are just a wildly disconnected.

David Keane - **37:16**

I see. So you're saying that. But that's okay. So you're saying that as well as the matching there is a self discovery.

Eric Zelman - **37:23**

Yes.

David Keane - **37:24**

I want to know more about what I should be doing. It's a self discovery thing.

Eric Zelman - **37:29**

Right.

David Keane - **37:30**

But I get a lot of it. The tricky part is, and this is I'll try and you know, anti sell the Kool Aid. But the problem is that everyone can do it, as you know, because Eric Zellman's doing it. Not that Eric Zellman isn't brilliant.

Eric Zelman - **37:46**

No. But that's right.

David Keane - **37:48**

Everyone can do it. So the, so the problem is if everyone can do it, where is the role for a Jack and Jill or a lens or anything? If everyone can do it.

Eric Zelman - **38:02**

Right. And so, you know, everyone can do it. Jack and Jill can do it, but they're not doing it. I want to know why they're not doing it. Right. So there's a bunch of validation on that too. Because if I'm responsible, I mean if

someone gives you 20 million bucks, right. They're going to expect something in return. And I'm imagining it's sort of like the listening to people talk about, you know, intelligent life elsewhere in the universe. It's here, it should be somewhere else. I doubt that you and I are the only two people who've ever had this conversation. And I'm sure the people who gave Jack and Jill $20 million said why did you go broad versus deep? Right.

David Keane - **38:43**

Maybe you're okay so that.

Eric Zelman - **38:48**

So, so you know, it's a question. So I'm still in this sort of testing and validation space. So I don't know that I know enough yet. On Tuesday. This is, this is a fun one. You'll, I think you'll like. I think this is great. My father in law lives in Florida and he knows this woman who friend of theirs they hang out with and she's been retired for about 10 years, but prior to being retired she was the head of executive recruiting at Goldman Sachs for 30 years.

David Keane - **39:20**

Oh, wow. Geez.

Eric Zelman - **39:21**

Yeah. And so Edie and I are going to talk on Tuesday because I sent her a three page overview of just the general, the gist of what this is this beginner's document. And she's, I'm, you know, so maybe I'll just get five minutes of coaching from her. May I'll get more validation. But I'm fascinated by that. I, I'm, you know, I mean, I want to know is this a problem anyone really wants to solve? I mean the other instructional thing that James said is that he said I think this is a great individual person discovery tool. And he's like, and there are a lot of middle aged people like Eric Zellman who probably would want to use this tool to figure out what just happened. Where do I go, that kind of stuff. Right. I don't know if that's worth anything, but it's interesting.

Eric Zelman - **40:05**

What he did warn me about is that when he talks to his corporate customers right now, the people he's coaching who are, you know, he worked at Microsoft for like 20 years and so he's all at Seattle people when he talks with those folks, they're not spending a lot of time worrying about making bad hires. You know, bad hires is a big reason why teams buy tools to weed out that mistake. Right. To avoid that mistake, to avoid all the repercussions of that. He's feeling right now that they're just trying to fill those jobs and they're less, they're like if something, you know, if they make a mistake, that's not great. But it's not important enough to drive them to a whole set of tools as at the, as a filter. So I don't know, I'm just trying.

David Keane - **41:07**

To think just by the way, as interesting coincidence. I'll send it in, I'll send it in imessage because that's where we're chatting before and it won't get lost. It's funny. YouTube. I was, I was doing my YouTube fun stuff this morning and I got somehow I got recommended a little video to send you in imessage which I thought was very interesting. Very interesting. And it might fit. It's incredible, but it might fit some of the things we just talked about. Very interesting video. Watch it, watch it at your leisure.

Eric Zelman - **41:38**

Yeah, right.

David Keane - **41:40**

Very interesting. So Eric, the thing is someone going to write a check to productize this into a website? Right. And the answer is it's very hard. It's very hard. Right. It's not personal. I don't know how those guys at Jack and Jill did it. I mean it's really hard. Is there something you could do with this though? The thing I do know for sure is that companies, think of all the companies you supported at Big Tin can, those mid market normal companies. I like to talk about Brookdale, Eric, because you remember Brookdale, right? Brookdale bought Brookdale, got a marketing plan app and by the way, they somehow had some content hub licenses. They never even knew they had it in there, but they had to have it, right? Because they wanted a solution for their marketing plans.

David Keane - **42:43**

One of the things about AI is every company like Brookdale at the board level, the board is saying what are you doing with AI? And these mid market companies are saying, we know we're doing, we're trying to whatever, but they don't really have anybody in their company who knows how to do things that you can do. Right. Think of it. Nobody like Eric Zellman is going to work at Brookdale and they don't have a role for someone like an Eric Zelman yet because they just haven't worked out that they have to have one. So I'm just trying to think where your amazing skill could have a big commercial impact. And the question is it's like a split in the park.

David Keane - **43:26**

Either someone's going to write a check to back Eric to turn this into a website or this experience and this skill you could now apply to solving any problem for a Brookdale or a. Yeah, Gordon Foods or whatever. Right?

Eric Zelman - **43:46**

Yeah.

David Keane - **43:48**

Excuse me.

Eric Zelman - **43:49**

Yeah.

David Keane - **43:50**

Or a Sloan. Right? That's the question. The question is, where do you take this experience? Right? Does it become a website or does it become an Eric Zellman agent that you bring with you? And you call up people and say, I've got this agent, let's call it an agent for the moment. And it does these amazing things. Would you like to use? You know, if you employ me, you get my agent for free.

Eric Zelman - **44:21**

Right, right.

David Keane - **44:22**

That is. That is where I think it might be. The market might go. It might be. And the thing is that where the super brain of Eric Zellman should go? Because I don't know how to wish I could, number one, wish I could write you a check. I can't.

Eric Zelman - **44:42**

No, no, no, no.

David Keane - **44:43**

Number two is. Well, it's worth saying. It's worth saying. I wanted to tell you I think you've got a great idea. Second thing is someone else going to write you a check? I mean, I back you and be a great reference anytime, but that's not enough. You need someone to write a check, I think.

Eric Zelman - **45:00**

Yeah. I mean, it's interesting. So with Jared's experience, I mean, his thing is maybe easier to productize, depending how you look at it, because you could say anyone could do any of these things. And he vibe coded his. His LinkedIn sales post tool, right? He has people calling him, asking to pay. He's got. So now he has companies that are actually doing trials of it that they want to pay like a monthly fee. Right, right. So, you know, companies.

David Keane - **45:28**

That's companies. Yeah, what I'm talking about. Right. I think trying to turn it into. Into a website, to use that expression, right. Is tricky because you won't get discovered unless, I mean, you know, you should. Well, you try.

Eric Zelman - **45:43**

So. So what I think has to happen, I think what the lead is, I mean, is, you know, Jared said people would love this. So if you could do this, if I could afford to do this cheaply so that hundreds of people could try it or whatever and post on Reddit or whatever on LinkedIn or whatever, there are a lot of people will be like, that's a really cool thing, right? I like that, or I liked it, or I didn't like it, or, you know, as my. My Irish friend said, it's shite. I mean, so, you know, I think it needs to get out in the world and then figure out, are people wanting to see the other side of it. Does it have that traction? Does it have any traction? Right? Are people like, I just pay For Claude.

Eric Zelman - **46:27**

Why would I, why would I give Eric?

David Keane - **46:28**

Well, that's the problem of course. As you know what we see on the screen right now, you just upload some stuff into Claude and it creates it for you. Right? Yeah, that's the problem. Right. I mean one of the thoughts I had just as you were talking was you turn this into a skill for open claw and the whole system is a skill for open claw and maybe that takes off. Your open claw is searching for jobs for you and looking for matches.

Eric Zelman - **46:57**

Yeah.

David Keane - **46:58**

And it's doing it as an agent, I think.

Eric Zelman - **47:02**

And you know, it's interesting. I mean that's what Nathan is. Right. So I mean Nathan or openclaw, depending him. It's so to get what I, where I went with this is to me it's so it's more than just like one routine. I mean there are just literally hundreds of nodes that sort of create the searches and to do the scraping.

David Keane - **47:28**

You may have seen the latest Andre, you know Andre Karpathy, the ex Tesla guy? No, he just, he basically published on. He's the one of the original co founders of OpenAI then he was Tesla's full self driving guy and now he's just a man about town talking about stuff and he's very well followed on X And he published something two days ago about building your own personal wiki. So the AI builds your personal wiki in real time for you. Yeah, Right. And that's gone ballistic. So I mean the thing about it is I keep coming down to this. Is someone going to write a check so this can become lens AI backed by millions of dollars. Right.

Eric Zelman - **48:14**

Or even, or even a tiny amount of money?

David Keane - **48:17**

Well, the problem is a tiny amount. I don't think this is the thing I've learned. No one does tiny amounts of money because tiny amounts of money are just throwing it away. You've either got to put proper money or no money. The thing is someone going to do this if it takes off virally? I mean that's the other thing you said a good point.

Eric Zelman - **48:36**

Which is.

David Keane - **48:36**

And maybe you're right, you just got to see whether it can take off virally. So get the right URL, test it all, get the right security, then just fucking put it up on Reddit and see if somebody cares.

Eric Zelman - **48:48**

Right, Yeah, I mean that. I just, I just refactored the whole thing this weekend to take out. To make all of my API calls proxied so people don't get my anthropic key.

David Keane - **49:00**

Nice. But But I mean, the point is, this is why I keep just smiling at this whole thing. Because it's not that Eric Zelman isn't brilliant, but there are going to be thousands and thousands of Eric Zelmans.

Eric Zelman - **49:09**

No, there are.

David Keane - **49:10**

And then, Eric, worse than that, there's going to be the AI that does what you did. So the AI that coordinates the building of the lens. Right. Rather than the person doing it. So I keep coming back to this. I've got this personal view at the moment. I don't know if it's right or wrong. Right. Which is the opportunity, I think, is to go to Brookdale and Gordon Foods and Sloan, who can't do this yet, and say, I've got an agent that you should use. It does this and this. And you employ me as an advisor and I give you the agent free. That business case might be a really good one. Rather than trying to build the website the old way. The old way where you'd build a website and people would come to your website and give you $29 a month.

David Keane - **50:16**

There'll be some people who can do that and good luck to them, but not many. Not many, because. Have you heard this term called a rapper? You heard this term?

Eric Zelman - **50:26**

Oh, yeah. I mean, yes.

David Keane - **50:29**

I mean, everyone. Everyone's a rapper. Everyone's a rapper.

Eric Zelman - **50:34**

Yeah.

David Keane - **50:35**

And so anyway, that's what I'm currently seeing. I'm seeing that if you can become the website. Great, Amazing, incredible. You've got to know people who can write big checks or start with right towards big checks. I mean, that guy who got 20 million, you don't know the real story. It could have been he got 2 million and promised it up to 20 if this happened. What they call a ratchet, which says if this happens and if that happens, which is always. Because, you know, don't believe the hype, as they say, everyone's selling, but still. And I don't know how to help with that. I wish I could. I don't know how to help with that. That requires someone to, you know, come and do it.

David Keane - **51:20**

But I do think there's a market for the companies that need an Eric Zelman but can't find one, can't employ one, don't know one. Right. That's where the opportunity is.

Eric Zelman - **51:36**

Yeah, I mean, no, I appreciate that. I think. I think where, like, one of. I mean, if one of the things that I've thought about with this tool is that maybe it isn't a website, but maybe it is a vehicle for conversations with companies that need to do this on a smaller scale or larger scale within their own internal teams. And maybe this is driven also by a partnership with coaches where for instance that next time someone goes and does disc assessment they use this tool as a way of. Of, you know, dealing with.

David Keane - **52:19**

Did you read the. Yeah. Did you read the post that Jen Monkovitz wrote on LinkedIn?

Eric Zelman - **52:26**

I read one of hers recently.

David Keane - **52:28**

She wrote about building about HR systems and why the new world is you're better off to build it than buy it. Did you read her post?

Eric Zelman - **52:36**

I did read that. I should take it to heart.

David Keane - **52:39**

Yeah. I think she's. That's what's happening. That message is going. It's a forest fire spreading across the business world. Okay.

Eric Zelman - **52:52**

Yep.

David Keane - **52:52**

And maybe you're in a great place. You see again, I don't know enough to say that this could be a big website where people pay 19amonth, whatever the hell they pay and they get happy and do it. I don't have any. I can't contribute anything on that. I just don't know. I don't know. But I do know that companies are going to want to bring people in who bring their agents with them and who can achieve goals like you've achieved here to simply help them to out compete the guy who doesn't bring in the person with the agent. And even better, you've got to remember that this is something really important. I'm seeing it everywhere. Is there is unlimited.

David Keane - **53:42**

If you go to the CFO of any company and say I want to spend money on AI, the CFO says spend as much as you like. But just remember, everything you spend, the budget comes from hr. In other words, from people, unfortunately.

Eric Zelman - **53:59**

Right, yeah.

David Keane - **54:00**

But spend anything you like as long as the budget comes from hr. So you're going to have to think about that like how you're going to improve the people process by removing people. Sounds scary. Sounds like Inception. But there's something in the idea of that. That's what I feel at the moment.

Eric Zelman - **54:20**

No, I. And I, I get that. Last week I interviewed with a company that's a healthcare startup. They're called Ascertain. They. This is an interesting story or a totally dystopian story. The largest employer in the state of New York is Northwell Health.

David Keane - **54:38**

Wow.

Eric Zelman - **54:38**

Of course, Northwell health owns about 30 hospitals.

David Keane - **54:43**

Yep, sure.

Eric Zelman - **54:44**

Northwell Health owns 30 hospitals because they're backed up by Deerfield, a private equity firm that's basically draining all those hospitals of their lifeblood. Like a vampire.

David Keane - **54:55**

Yeah.

Eric Zelman - **54:56**

This tool that they. So their thesis is they have an AI tool that helps deal with hospital paperwork because hospitals spend 20 to 25% of their spend on administration. That tool came out of Deerfield investing in AI and now they want to commoditize that in the marketplace.

David Keane - **55:16**

Yeah, yeah. You see, I mean, look, the world is going through a very interesting change. All I can share with you is that I do believe there is what Jen wrote in her post is what a lot of executives are thinking. That's all I can share with you. I appreciate memory. Put that in your random access memory and think about it. That's what I. That's what I believe. That post is what people are thinking. Right. Executives are thinking. People with money are thinking.

Eric Zelman - **55:50**

Yes.

David Keane - **55:51**

I don't know what early stage VCs are thinking now because they all went through the fund, the wrapper stage and they've now all been told at the golf club, don't fund rappers. Okay. There's even a term called a double wrapper. Now, have you heard the term called a double wrapper?

Eric Zelman - **56:06**

No.

David Keane - **56:07**

So a double wrapper is someone who just uses vapi. Do you know what vapi is? Vapi. It's a company that wraps up all of the voice APIs.

Eric Zelman - **56:19**

Oh, yeah, yeah.

David Keane - **56:20**

There are people double wrapping now.

Eric Zelman - **56:24**

Right.

David Keane - **56:24**

And there's fun chatter and Reddit about people doing triple wrapping.

Eric Zelman - **56:29**

Well, this was the thing that you brought up last time, which was that of this brokering of other people's tokens and creating. And I applied for one of these companies that was basically a cost. They bulk buy AWS or Azure services and then resell them to other companies at lower cost. So it's like Groupon for corporate I T. Yeah.

David Keane - **56:56**

Oh yeah, yeah. It's funny, isn't it? So anyways, I. I think you've done a tremendous job. I really love the ui. I think it's definitely. The concept makes sense. I think you put tremendous effort into this. The question is, where's the commercial value?

Eric Zelman - **57:14**

Where's the payoff? Yeah, yeah.

David Keane - **57:16**

Where's the.

Eric Zelman - **57:19**

It might be that I need to pitch this as. This is what I bring to you versus this is a business that you pay me monthly for.

David Keane - **57:29**

That's what I think is going to be the future is you will bring your own age. Let's just call it an agent because it sounds sexy, right? You will bring your own agents and you might break this into three different agents. So it sounds like more than. You might make up three different bits of it. But these are the three agents you bring with you. Right. As an employee, if you're going for the employee side, or maybe even it's the contractor side, hey, you hire me.

Eric Zelman - **58:01**

You know, I think that the contractor side is probably. I mean, just in my brain, that's probably the more likely fit because it's, you know, it's an evolving and changing marketplace and AI landscape. So what I see is someone bringing me in to do work for them like this for a few months. And I see it. But, you know, again, I mean, who knows? Does it fit with. Because they want to do something in HR that they want to bring in a coach to do something. Do they want. You know, I mean, yeah, that. That's a question. And I also wonder, you know, that's.

David Keane - **58:46**

What you're good at. I mean, you're very good at working with people. This is your superpower, working with people and guiding them in a positive. I don't want to use the word gentle, but helping them to get to their goals without bullying them. In a way, they feel good about it. So I think, anyway, I don't know enough. All I can tell you is what I'm seeing. What I'm seeing is Jen Monkovitz's post is what they're all talking about at the golf club.

Eric Zelman - **59:18**

Yep, Yep.

David Keane - **59:19**

Okay. And I'd be talking to Jen if I were you.

Eric Zelman - **59:25**

I. I will. I'll definitely bring her in. Yeah, I had thought about this. This, The. The, you know, my hierarchy. You probably. So you're a great founder, so you probably don't have these mental blocks. I was going to get to the HR people soon. You know who actually is the hardest? The person who I'm most intimidated about showing my product to is usually my wife.

David Keane - **59:50**

Of course, they're the scariest ones of all. Every good husband is. Every good husband is scared of their wife's opinion.

Eric Zelman - **59:58**

Like, she's like, great, Eric, how do.

David Keane - **01:00:01**

You make some money out of this? Get up. Make some money out of it. I think that bit of pushing is good for you, Eric. I think that. Talk to Jen. My suggestion would be in your journey of talking to people, talk to Jen Monkovitz. Talk to Jen and say, hey, what are you seeing? Because you might find that this is what's going on. This is what's going on.

Eric Zelman - **01:00:29**

Yeah, no, I need to dig deeper into thesis. I mean, you know, the hiring managers and the HR people are critical to this, to. To understanding, you know, could be if.

David Keane - **01:00:39**

If that's where the market goes. And the big question for you is, who is the person going to give money for this, Is it the Eric Zellmans, the millions of Eric Zellmans looking for jobs? Is it the. You got to remember how does indeed survive. What's the employers that pay?

Eric Zelman - **01:00:57**

Yeah, right.

David Keane - **01:00:59**

Not the job searches, it's the employers that pay.

Eric Zelman - **01:01:01**

And I think that's what, I think that is the business revenue. That's the revenue model of what Jack and Jill is trying to do. Because as a searcher, it doesn't cost me anything. And so they're trying to sell this as a premium search tool. But again, you know what I think is interesting or remarkable is that I keep looking at their site, I keep feeding in the ui, I kind of vibe code the same stuff myself. And I know it's like don't believe the hype but it's like I can't believe that someone gave them money.

David Keane - **01:01:36**

Yeah, I know. It's always, you're always going to feel that way, Eric. Don't worry. You're always going to feel that way. Everyone always feels that way. Worry. Talk to Jen.

Eric Zelman - **01:01:45**

Yeah.

David Keane - **01:01:45**

Talk to a few more people. Work out that. All I can suggest is I think this is, I mean, I'm so pleased you've done this because it turns you from being, now you're someone that can help other people.

Eric Zelman - **01:02:02**

It's exactly what I, you know, where I want to be. You know, you can help other people.

David Keane - **01:02:08**

And you're just going to work and it's going to change your mindset from, I think from. And maybe this is the way of the future is there are no jobs. There is just a man with an agent.

Eric Zelman - **01:02:21**

Or a series of agents or.

David Keane - **01:02:23**

A series of agents. Even better on your resume. It should be, here are the 14 agents I own. Right. If you're looking for a job, if you actually want an employment job, you put that on your CV, which is these are the 14 agents I own. I'll bring with me and give them to you if you employ me. That let that get a conversation going.

Eric Zelman - **01:02:45**

Interesting. I wonder what that looks like. I'm just trying to extrapolate the high level idea to the practical.

David Keane - **01:02:54**

Ask the AI to take your product and create the agents out of it for you. I mean, this is the thing that I just find incredibly interesting is just to let you know because I've been on the inside of this stuff for a little bit. The current AI models that we're using today are all trained on the previous generation of AI hardware. We're about to see new models coming out in the spring Maybe late spring, trained on the next generation of AI hardware. The people I know tell me you've got an order of magnitude improvement intelligence. So what you see now is nothing.

Eric Zelman - **01:03:37**

Yep, yep.

David Keane - **01:03:38**

That's why Meta and all these guys are laying off people, because they know that the next generation is. Because it's the way it works is you get the hardware with certain capacities and you have to train for months. Right on it. So if you ask the current models, what's their cutoff date? It's like summer 2025.

Eric Zelman - **01:03:59**

Oh, yeah, no, I hit that all the time.

David Keane - **01:04:01**

Right. So what's happening is the next generation of hardware came online second half of calendar 25. So you're about to see the new models coming out, trained on that new hardware, and that's going to be at least an order of magnitude better intelligence.

Eric Zelman - **01:04:24**

Yeah, it's really interesting. I mean, this has nothing to do with my project, but I was looking at this, someone put this LinkedIn chart of revenue per employee and the incredible growth of, what's that coding platform. Cursor. Yeah, Cursor has like, I think each Cursor employee basically is worth like a hundred million dollars.

David Keane - **01:04:53**

Oh, yeah.

Eric Zelman - **01:04:54**

Or something. Or third. No, 13 million. Right, 13. 13 Million. Whereas each Apple employee is 2 million.

David Keane - **01:05:02**

Yeah, but the problem for them is all they're doing is wrapping up LLMs.

Eric Zelman - **01:05:12**

I mean, I know I, I, I put into, you know, from our last conversation, and I think you should, I think this, if this, if business cards were a thing still, your business card should absolutely 100% say the only defensible moat is tokenization.

David Keane - **01:05:30**

I think the defensible moat still is knowing what to do.

Eric Zelman - **01:05:35**

Right.

David Keane - **01:05:36**

Still. Right. Now what I'm saying to you is that in a year the executive will just ask the AI what to do rather than asking your Exhalen what to do. You see what I mean?

Eric Zelman - **01:05:48**

Yeah.

David Keane - **01:05:48**

If you've got a next level coming and there's another hardware change after that. So if you've got this thing whereby you won't need to employ an Eric XELMAN with these 17 agents, you'll just ask the AI to create the 17 agents.

Eric Zelman - **01:06:00**

Right, right.

David Keane - **01:06:01**

Or not even that. You actually, you won't do that. You'll ask the AI what agents do I need to create? Not create them. You don't need to ask Andy. But for now, I think reality is, the reality is if you're Brookdale or Gordon Foods or Sloan, you can't, you don't have an Eric Zelman.

Eric Zelman - **01:06:22**

Yeah, no. And it's, it's actually wild even talking to people frankly at Big Tin can because their use of AI within the business is so primitive. And, you know, and I, I mean, you know, talking to Lewis or dealing with dawn or however this information is getting rolled up, there's, they're really, you know, they, I, I don't even know if Vector really grasps what they could do with the information that they have.

David Keane - **01:06:56**

I know, but so, but that's happening everywhere. Yeah, it's even worse at Brookdale.

Eric Zelman - **01:07:04**

Right.

David Keane - **01:07:06**

But look, just think about that. That's, I mean, really appreciate you talking me through it. Thank you for sharing.

Eric Zelman - **01:07:12**

Absolutely.

David Keane - **01:07:13**

I think, Yeah.

Eric Zelman - **01:07:15**

I mean, thank you for all the feedback. I mean, that's really, that's. I was, I'm excited to get the feedback and I. This is, this is incredibly helpful.

David Keane - **01:07:25**

Yeah, I mean, you've done, I think your position, the biggest thing you've done is you've jumped that chasm. And this is a different Eric Zellman. This is not the Eric Zellman that actually talks about on the screen right now. Okay. Because you haven't given it the information on the new Eric Zellman, which is the Eric Zellman that can create agents and build solutions and, you know, map all this with a AI leadership, blah, blah, whatever crap you're making up. The Eric Zelman on the screen I'm looking at right now is a different one that I would be selling. I'd be selling the Eric Zelman that again, comes with. Carries a bag of agents with him.

Eric Zelman - **01:08:06**

I'm gonna go hit that hard. Thank you so much.

David Keane - **01:08:09**

You know, keep in touch, man.

Eric Zelman - **01:08:12**

Thanks, dude.

David Keane - **01:08:13**

See, Eric, by.
